YMPO TAC MEMBERS

Chair VACANT

Vice-Chair Eulogio Vera, Public Works Director, City of San Luis Member Sam Palacios, Public Works Director, City of Somerton

Member Mark Hoffman, Senior Planner, ADOT

Member Susan Cowey, CIP Administrator, City of Yuma
Member Frank Sanchez, County Engineer, Yuma County
Member Jennifer Albers, Principal Planner, City of Yuma
Member Joshua Scott, Public Works Director, Yuma County
Member Joseph Grant, Public Works Director, Town of Wellton
Member Eric Holland, Planning Director, Cocopah Indian Tribe

Member Dave Wostenberg, City Engineer, City of Yuma

YMPO TAC EX-OFFICIOS

CALTRANS Beth Landrum
EPA John Kelly
FHWA Romare Truly
FTA Ariana Valle
YCIPTA Shelly Kreger

1. Call to Order and Declaration of Votes

The meeting will be called to order and the City of Yuma will declare the number of their votes.

2. <u>Title VI of the Civil Rights ACT of 1964</u>

A brief message will be read out reminding members of our Title VI obligations. YMPO has on the TAC Website Survey Cards for the public to complete. Please send these to Charles Gutierrez, YMPO Senior Planning Manager, at cgutierrez@ympo.org.

Jesus Aguilar (JR) will read a Title VI Statement, Information Only.

3. Call to the Public

This item is to provide an opportunity for comments by the public. Individuals wishing to address the committee need not request permission in advance and are limited to three (3) minutes.

4. Approval of Minutes

The approval of the September 8, 2022 minutes.

This item is on the agenda for information, discussion, and/or action.

5. Off-System Bridge Program

The City of Yuma and Yuma County are requesting a Transportation Improvement Program (TIP) Amendment.

Mark Henige, ADOT, will present this item. This item is on the agenda for information, discussion, and/or action. Please refer to Summary Agenda Item 7.

6. <u>Technical Advisory Committee (TAC) Officers</u>

The Technical Advisory Committee has the Vice Chair serving as the Temporary duties of the Chair due to unforeseen events. The TAC needs to fulfill the Chair or Vice Chair's position for protocol of the bylaws.

This item is on the agenda as information, discussion, and/or action. Charles Gutierrez will present this item. Please refer to the Summary Agenda Item 5.

7. Rail/Heavy Freight Study Update

YMPO Staff and Kimley-Horn team will present further findings of the Rail Study.

Charles Gutierrez, YMPO, and Mr. Chris Joannes, Kimley-Horn and Associates will present this item and is on the agenda as information, discussion, and/or action.

8. Regional Project Priority List

The TAC recommended a list to the YMPO Executive Board and was accepted by the Board. Charles Gutierrez, Senior Planning Manager has a concept to present the YMPO Technical Advisory Committee for the Regional Priority Lists that were submitted to the RTAC.

This is on the agenda for information, discussion, and/or action.

9. Performance Measures

Performane measure update is required as part of the Federal Process. YMPO Staff will present the changes to the data and will require recommend approval from the state adoption.

This is on the agenda for information, discussion, and/or approval. Please refer to the Summary Agenda Item 9

10. Regional Coordination Plan Status Update

The YMPO Regional Coordination Plan Second Release has been released to the public for the Request for Proposal (RFP) phase of the plan. A schedule has been established and the ranking and recommendation of a viable consultant is the next phase. Scoring results will be presented to the TAC for recommendation for the Executive Director to proceed with negotiations.

Charles Gutierrez and JR Aguilar, YMPO, will present this item. This is on the agenda for information, discussion, and/or action. Please refer to the Summary Agenda Item 10.

11. Population Technical Advisory Committee (POPTAC)

YMPO staff will begin discussion concepts or ideas that surround the adoption process for the YMPO to be a part of the Census effort in the region. Discussion will ensue with possible creation of a Population Technical Committee (POPTAC).

Crystal Figueroa will present this item. This item is on the agenda as information, discussion, and/or action. Please refer to the Summary Agenda Item 11.

12. YMPO and ADOT

YMPO and ADOT staff will have the opportunity to update any other business that is or was not covered in the previous agenda items.

- a. YMPO November 11 Veteran's Day
- b. Roads & Streets Success
- c. Rural Transportation Summit 2023 YMPO Hosting
- d. ADOT MPD Update

This item is on the agenda for information and discussion. Charles Gutierrez (YMPO) and Mark Hoffman (ADOT) will present this item.

13. In-Kind Match Forms

This item is on the agenda as a reminder that all YMPO business that any member or staff that does work for YMPO in any form (i.e., read, comment, meetings), YMPO is able to capture portions, or all, of your time as 'soft' match for those YMPO programs.

This item is on the agenda for information and discussion only.

14. TAC Status Report

Member agencies will have the opportunity to report the status of their projects (Local or Federal). A list of ongoing projects is shown in the information below.

Town of Wellton: No projects listed

Yuma County:

Avenue 28E and County 9th Street (Off System Bridge Project)
Avenue D/E Corridor through 18th Street to 23rd Street
Martinez Lake and Red Cloud Mine Road
County 12th Street from Fortuna to Avenue 12E (reconstruction project)
North Frontage Road from 10E to Fortuna

City of San Luis:

Cesar Chavez (Juan Sanchez) Boulevard

City of Yuma:

32nd Street Ave B-Ave D Avenue B – Reconstruction 24th Street-16th Street 18th St & Ave C 28th Street Widening between 33rd drive –

City of Somerton: No projects listed

ADOT:

I-8 Sentinel Rest Area Project

I-8 MP 0.1 – 31 Various Bridges

I-8 Colorado River Bridge Repair Project

I-8 Wellton-Ave 36E Pavement Life Extension Project

US 95, Ave 9E to Rifle Range Rd Project

US 95 Rifle Range Rd to Mohawk Canal Bridge

US 95 Wellton-Mohawk Canal Bridge Project

US 95 MP 67-80 Pavement Life Extension Project

Cocopah Indian Tribe: No projects listed

15. <u>Future Agenda Items</u>

Members will have the opportunity to suggest future items for the TAC agenda.

- a. TIP Amendment
- b. Grant Awards

16. <u>Progress Reports</u>

YMPO staff has provided a list of recent activities

- a. Sep 8 TAC meeting (CF, CG, NC, JR).
- b. Sep 9 Yuma County Arizona Economic Recovery Center (CF).
- c. Sep 12 Cyber Security Training with YC IT (All).
- d. Sep 12 5310 Regional Mobility Committee Meeting (JR).

- e. Sep 14-16 RTS Conference (CF, CG, BD. JR, PW).
- f. Sep 16 Arizona State Transportation Board (CF, CG).
- g. Sep 19 CTS Meeting (CF, CG).
- h. Sep 20 Yuma PM10 SIP Update Call (CF, CG).
- i. Sep 20 ASRS Employer Conference (BD).
- j. Sep 20 Age Friendly Arizona Conference 5310 (JR).
- k. Sep 21 Rural Transportation Summit 2023 Contract (CF, BD).
- I. Sep 21 Carbon Reduction Program Overview (CF, CG).
- m. Sep 21 Nationwide Presentation (BD, CF, CG, JR).
- n. Sep 21 5310 RCP RFP Due (CG, CF, JR).
- o. Sep 22 Executive Board Meeting (CF, CG, BD, JR).
- p. Sep 22 5310-RFP Packets Distributed to Review Committee (JR).
- q. Sep 26 ADOT/YMPO Monthly Coordination meeting (CF, PW, CG).
- r. Sep 27 5310- Saguaro Foundation presentation (CF, JR).
- s. Sep 27 MAG-YMPO POPTAC Discussion (CF, CG).
- t. Sep 28 Yuma County's Regional Economic Development Meeting (CF).
- u. Sep 28 Transportation Sales Tax Meeting with YC (CF).
- v. Sep 28-30 Roads and Streets Conference (All staff).
- w. Oct 3-6 The Pun Group Onsite Field Work (CF, BD).
- x. Oct 6 Arizona State Transportation Study Session (CF).
- y. Oct 10 RTAC Advisory Committee Meeting (CF).
- z. Oct 10 ADOT/YMPO Monthly Coordination Meeting (CF, CG).
- aa. Oct 11 Transportation Meeting (CF, CG).
- bb. Oct 12 COG/MPO Director's Meeting (CF).
- cc. Oct 12 Avenue E/D Industrial Corridor Project (CF, CG).
- dd. Oct 12 Arizona STSP Pedestrians EA Meeting (CG).
- ee. Oct 12 5310 Maintenance Forum October 2022 (JR).

17. Adjournment

<u>Notice:</u> In accordance with the Americans with Disabilities Act (ADA) and Section 504 of the Rehabilitation Act of 1973, YMPO does not discriminate on the basis of disability in the admission of or access to, or treatment or employment in, its programs, activities, or services. For information regarding rights and provisions of the ADA or Section 504, or to request reasonable accommodations for participation in YMPO programs, activities, or services, contact Crystal Figueroa or Charles Gutierrez at 928-783-8911.

TECHNICAL ADVISORY COMMITTEE REGULAR MEETING MINUTES

YMPO TAC MEMBERS

Member Mark Hoffman, Senior Planner, ADOT

Member Frank Sanchez, County Engineer, Yuma County
Member Jennifer Albers, Principal Planner, City of Yuma
Member Joshua Scott, Public Works Director, Yuma County
Member Joseph Grant, Public Works Director, Town of Wellton
Member Eric Holland, Planning Director, Cocopah Indian Tribe

Member Saul Albor, Principal Planner, City of Somerton

Member Dave Wostenberg, Director of Engineering, City of Yuma

YMPO TAC MEMBERS ABSENT

Chair VACANT

Vice-Chair Eulogio Vera, Public Works Director, City of San Luis Member Susan Cowey, CIP Administrator, City of Yuma

YMPO TAC EX-OFFICIOS

None

ADDITIONAL PRESENT

Mike Blankenship P.E., Greenlight Traffic Engineering Antonio Martinez, MCAS Yuma Peter Valenzuela, Kimley Horn Gene Dalbey, Yuma Region Bicycle Coalition

YMPO STAFF PRESENT

Senior Planning Manager Charles Gutierrez
Executive Director Crystal Figueroa
Principal Engineer Paul Ward

Administrative Assistant Norma Chavez
Mobility Manager Jesus R Aguilar Jr

1. Call to Order and Declaration of Votes

Member Joseph Grant called the TAC meeting for September 8, 2022, to order at 9:10 A.M as Eulogio Vera, Vice-Chair was absent during this meeting. Dave Wostenberg declared the votes for the City of Yuma as follows, Jennifer Albers 2 and Dave Wostenberg 3.

2. <u>Title VI of the Civil Rights ACT of 1964</u>

A brief Title VI Nondiscrimination Notice to the Public was read by Jesus R Aguilar, Jr.

3. <u>Call to the Public</u>

Gene Dalbey, Yuma Region Bicycle Coalition, briefly expressed his positive experience in the Yuma Region.

4. Approval of Minutes

TAC minutes were presented as is and no discussion ensued. Ms. Albers motioned for approval. Frank Sanchez, Yuma County, seconded the motion. Motion carried. The August 11, 2022 meeting minutes were approved.

5. Technical Advisory Committee (TAC) Officers

Charles Gutierrez, YMPO, suggested that the TAC begin discussing the officer status as the Chair position is now vacant due to Chris Young no longer working with the City of Yuma. He also informed the TAC that the Executive Board's Chair for the year 2023 will be Council Member Gary Knight from City of Yuma. He stated that YMPO tries to avoid having two individuals from the same entity in the Chair position as a matter of practice.

Mr. Gutierrez suggested tabling this item until next month's meeting as Vice-Chair Mr. Vera was not present during this meeting. This item will be presented to the Executive Board for approval after it has been discussed and member agencies of the TAC have made their recommendation for Chair.

6. Rail/Heavy Freight Study Update

Peter Valenzuela, Kimley-Horn, provided an update on the Rail/Heavy Freight Study. Three candidate alternatives were developed: Candidate A, Candidate B and Candidate C. An analysis was then conducted on the candidate alternatives to determine the recommended candidate. Mr. Valenzuela also mentioned that no feasible alternative is a potential outcome of the analysis.

Per the analysis, factors were considered in the matrix and scoring was based on Land Use, Land Acquisitions and Displacements, Transportation, Environmental Impacts, and Costs. In each of these categories it was further broken down. Scoring was based on impacts whereas negative effects are scored lower scoring, and against each other. Per the analysis, Candidate C receiving 51 points as the highest candidate compared to the B & C alignments.

Mr. Valenzuela asked the TAC if there would be any weighting in categories the committee would feel that is more important than the other.

Mr. Grant asked whether alternative C would be a separated grade or at-grade when it crosses 32nd Street.

Mr. Valenzuela said that if there was ever an at-grade crossing for a major highway then it would be above grade. Mr. Valenzuela then asked the TAC if they feel no categories should be weighted any differently, then would the TAC feel comfortable with the recommendation of Alternative C as the preferred alignment.

Ms. Albers asked if concerns from Marine Corps Exchange (MCAS) with Alternative C have been mitigated?

Mr. Valenzuela said the concerns have not been mitigated but that analysis' goal was to determine the best alternative given the physical, political constraints, and feedback from stakeholders. This does not imply that Candidate C is the best alternative and the highest anticipated ranking; however, after being compared to the other Alternatives, it scores the best, but it still considers that there are stakeholder inputs and concerns. If concerns can be further mitigated in the future, then Alternative C could be the alternative to be reevaluated. He ended by saying that no alternative could also be an option.

Ms. Albers asked if Alternative C should even be an option since in last month's TAC meeting, Mary Ellen Finch with MCAS said a rail would not be allowed along State Route 195 corridor.

Mr. Valenzuela based on the constraints and concerns; Alternative C is the better option when compared to Alternative A & B.

Mr. Grant asked if agreeing that Alternative C is the better option, which would not also mean that Alternative C is approved.

Mr. Valenzuela said that was correct. He also clarified that his question to the TAC is if Alternative C is the recommended option from the Study, not that C is the alternative that will be used to move forward for the project.

Eric Holland asked if any documentation has been received from MCAS with their concerns for the alternative. Mr. Valenzuela said when speaking with the MCAS representatives, their concern was anything happening along the corridor of the Barry Goldwater Bombing Range, safety, and the type of cargo that will come along the edge of the corridor. In his discussion with MCAS, Mr. Valenzuela addressed these concerns by telling MCAS that cargo is already moving along the existing highway, and right -of-way has made progress along the corridor. Therefore, it appears that there is an opportunity for right-of way acquisition for a future rail. However, it would take a lot of political backing to move along the corridor with MCAS.

Mr. Holland again asked if MCAS has provided solutions to their concerns that will result in agreement with the alternative.

Mr. Valenzuela said there are too many alternatives at the moment for mitigation discussions to begin with MCAS. Mr. Valenzuela said that if there is an alternative recommendation made for a very specific alignment then MCAS could weigh in more heavily on the finer detail points of the alignment.

Mr. Gutierrez reminded the TAC that although Alternative C is the preferred alignment, no feasible alternative is also an option. Mr. Gutierrez then asked Mr. Valenzuela if it was possible to make a recommendation saying Alternative C is the preferred alignment but not feasible towards the Study at this time.

Mr. Valenzuela said the final report can state that there is a preferred alignment based on the analysis, however, given the current climate it is not feasible.

Mr. Gutierrez asked how the recommendation would be written in the Economic Analysis.

Mr. Valenzuela said the Economic Analysis would still be reflective of the economic potential that the corridor could bring. However, it would cite given constraints, such as those from the US-MCAS-Yuma, stakeholders, and farming community.

Mr. Sanchez said any alternative that is selected will have constraints. Based on the analysis conducted, and now it is up to the TAC to decide whether Alternative C is the preferred option as the other alternatives go through residential and farming areas. Mr. Sanchez suggested selecting Alternative C as the preferred option but with noted concerns from MCAS.

Mr. Holland said that concerns from MCAS and the community should be noted in the recommendation.

Mr. Gutierrez reminded the TAC that they can choose an Alternative, an Alternative with no feasibility at this time with included language addressing the concerns, or no feasible option.

Mr. Sanchez stated that if the TAC were to choose no feasible outcome as an option, then the entire Study will die. Mr. Sanchez suggested the TAC choose Alternative C with some conditions where concerns are addressed.

Crystal Figueroa, YMPO, said there are currently no investors for this project. She continued to say that if there ever was an investor in the future, then the study would have to start from scratch.

Mr. Sanchez agreed with Ms. Figueroa and said that if the report states that there was no feasible outcome, it would deter investors.

Mr. Holland agreed and said Alternative C with language would be the preferred option.

Mr. Sanchez motioned to accept the Study's suggestion of Alternative C with conditions that the concerns are mitigated. Mr. Wostenberg seconded the motion. Motion carried.

7. Highway Safety Improvement Program FY 2025/2026

Mike Blankenship, Greenlight TE, provided an update for the 8 HSIP applications that were submitted. City of Yuma's HAWK application for 17th & 24th Avenue was dropped because there were no fatal pedestrian or bike crashes at that location. Mr. Blankenship stated that San Luis must provide a signed cover letter as the deadline for the applications is September 9, 2022.

Mr. Gutierrez said San Luis will provide their signed cover letter before the deadline.

Mr. Sanchez stated that two of the applications for Yuma County are include the San Luis and City of Somerton.

Mr. Blankenship said he was not sure if that was mentioned in the applications but would look back to confirm. Mr. Blankenship suggested a note be added to those applications.

Mr. Sanchez agreed with Mr. Blankenship to add a note on both applications stating they included San Luis and City of Somerton.

8. Regional Project Priority List

Mr. Gutierrez informed the TAC that the Executive Board has provided direction that each sheet presented to the Rural Transportation Advocacy Council will only reflect each entity's number one project.

9. YMPO FY 2023-2026 Transportation Improvement Program Amendment #4

Mr. Gutierrez presented two amendments that were requested by the City of Yuma and Yuma County. The first amendment was a cost adjustment for Yuma County's YC 23-03D. The design is being increased to \$443,682. They are also reducing YC 23-03C from \$1,492,428 to \$1,256,678 for the construction phase and putting

it towards the design phase. Per City of Yuma's request, COY-22-01D is being removed from the TIP as the bridge is not owned by the City.

Mr. Wostenberg moved to accept and adopt the changes to the TIP as proposed. Mr. Sanchez seconded the motion. Motion carried.

10. Regional Coordination Plan Status Update

Jesus Aguilar, JR, provided an update on the YMPO Regional Coordination Plan second release to the public for the Request for Proposal (RFP) phase of the plan. The RFPs are due on September 21, 2022 by 3 P.M. The RFP package will be distributed to the TAC and two (2) members of the Regional Mobility Committee on September 22, 2022. The TAC will have approximately 20 days to review the RFPs and will rank them with the scoring criteria that will be provided to them. The TAC will recommend a consultant on October 13, 2022. Action by the Executive Board for approval will take place October 27, 2022, with a notice to proceed. Then, roughly five months after the notice to proceed, the TAC will recommend the project for approval on April 13, 2023. The RCP final report is due April 27, 2022.

11. <u>Population Technical Advisory Committee (POPTAC)</u>

Ms. Figueroa began her presentation by stating that YMPO has not had a formal role in overseeing, or assisting with, the population count. During the most recent 2020 Census, YMPO reported on the participation percentages being published by the Census Bureau. However, the region still suffered an undercount. Ms. Figueroa gave an introductory presentation at the TAC on May 12, 2022, where she suggested that the region might benefit from YMPO planning assistance for population purposes. Ms. Figueroa continued to state that counts are especially important for Federal and State funding revenue for our region. Currently, there is no opposition for YMPO to take some kind of role to assist in the population efforts. Ms. Figueroa has met with Hector Tapia, who is currently working with Somerton and Wellton on population concerns for the 2020 Census. Ultimately, a region POPTAC would be beneficial as the region has experienced undercounts and would result in more federal and state funds over time, if properly conducted.

Mr. Wostenberg said any effort to get better, more accurate counts would be helpful for all member agencies and would like to see this effort move forward.

Ms. Figueroa would like all member agencies to discuss this effort with their staff before any action is taken.

Mr. Grant asked if what is being suggested is that the entities build an in-house program to assist in the gathering of information.

Ms. Figueroa said the POPTAC will be comprised of members in the region.

12. YMPO and ADOT

YMPO and ADOT staff will have the opportunity to update any other business that is or was not covered in the previous agenda items.

- a. YMPO TH Defense Community Infrastructure Pilot (DCIP) Program has been officially awarded to the State as the first round of awards in other words we are moving to the next phase of completing the award. ADOT has some work to do to align the state to the Department of defense reimbursement financial side of everything.
- Roads & Streets Registration TAC Members were instructed to contact Norma Chavez, YMPO if they need a car rental to attend the Roads & Streets conference.
- Rural Transportation Summit 2023 YMPO Hosting YMPO staff are currently looking for a venue to hold the Rural Transportation Summit in 2023.
- d. ADOT MPD Update Mark Hoffman, ADOT, provided updates as follows, ADOT continues with the update to the State Long Range Transportation Plan (SLRTP). They have distributed surveys to the COG's and MPO's to get feedback on what information should be presented as part of the public involvement process. Additionally, ADOT is looking at setting funding levels to be approved by the State Transportation Board, as the SLRTP is updated every 5 years. Mr. Hoffman moved on to the Arizona Sonora Border Master Plan. He said the San Luis stakeholder meeting was held on September 7, 2022, and a stakeholder survey is currently published on the project website. Mr. Hoffman also introduced Elene Mariel as the new bike-ped coordinator.

13. <u>In-Kind Match Forms</u>

This item is on the agenda as a reminder that all YMPO business that any member or staff that does work for YMPO in any form (i.e., read, comment, meetings), YMPO is able to capture portions, or all, of your time as 'soft' match for those YMPO programs.

This item is on the agenda for information and discussion only.

14. TAC Status Report

Member agencies will have the opportunity to report the status of their projects (Local or Federal). A list of ongoing projects is shown in the information below.

Town of Wellton: Mr. Grant said nothing to report.

Yuma County:

Mr. Sanchez said:

Avenue 28E and County 9th Street (Off System Bridge Project) - Completed and requested for removal.

Avenue D/E Corridor through 18th Street to 23rd Street - IGA and Board approved. The consultants are working on preliminary alignment.

Martinez Lake and Red Cloud Mine Road - Cannot come up with any asphalt. Project is at a standstill.

County 12th Street from Fortuna to Avenue 12E (reconstruction project) - Completed on Yuma County portion. APS initially said they were not sure if they had the right to install streetlights. Management from APS in agreement that streetlights can be installed. Request for removal.

North Frontage Road from 10E to Fortuna - Expected completion date is the end of October. Out to bid in November.

City of San Luis:

Cesar Chavez (Juan Sanchez) Boulevard - No comments.

City of Yuma:

32nd Street Ave B-Ave C - 100% completed plan. Waiting for license agreement and letter to proceed at own risk.

Avenue B – Reconstruction 24th Street-16th Street - 60% completed.

18th St & Ave C - 30% completed. Just completed survey to determine right-of-way.

28th Street Widening between 33rd drive-45th Ave. - pending right-of-way acquisition.

<u>City of Somerton:</u> Saul Albor, City of Somerton, said nothing to report.

ADOT:

I-8 Sentinel Rest Area Project - 85% completed

I-8 MP 0.1 – 31 Various Bridges - 38% completed

I-8 Colorado River Bridge Repair Project - Awarded to Future Construction & Engineering. Will begin work on February 23, 2023

I-8 Wellton-Ave 36E Pavement Life Extension Project - Currently looking for partnering.

US 95, Ave 9E to Rifle Range Rd Project - 80% complete

US 95 Rifle Range Rd to Mohawk Canal Bridge - went out to bid and awarded to Fisher Sand & Gravel.

US 95 Wellton-Mohawk Canal Bridge Project

US 95 MP 67-80 Pavement Life Extension Project - Partnership meeting is scheduled for September 15, 2022.

Ave 28E-Co. 9 - Project is complete.

Cocopah Indian Tribe: Mr. Holland said nothing to report.

15. Future Agenda Items

Members will have the opportunity to suggest future items for the TAC agenda.

- a. TIP Amendment Mr. Gutierrez advised of a possible transit tip amendment in October or November.
- b. Grant Awards

Mr. Sanchez informed the TAC that an ADOT representative gave a presentation to Yuma County Engineering providing them with some information on bridge funding. ADOT was allocating money for bride replacements at 100% with no local share without a one-million-dollar cap. Mr. Sanchez suggested Mr. Hoffman provide the TAC with more information on the subject in the future. Mr. Wostenberg also mentioned that he was informed about the bridge funding with no local match. Mr. Hoffman will provide the TAC with more information on this funding type in the future.

16. <u>Progress Reports</u>

YMPO staff has provided a list of recent activities

- a. Aug 1 Staff Meeting (All).
- Aug 2 Scheduling Meeting to Discuss Yuma HAWK HSIP Application Pedestrian Counts (CF, CG).
- c. Aug 2 YMPO & ADOT Transit/5305(4)e (CF, CG, JR).
- d. Aug 2 RTS 2023 planning Meeting (CF, BD).
- e. Aug 2 YMPO Rail/Heavy Freight Study (CF, PW, CG).
- f. Aug 2 KHA Rail Meeting (CG).
- g. Aug 4 Western Growers Association Rail Discussion (CF, PW, CG).
- h. Aug 4 RFP Process Complete Streets Study (CF, PW).
- Aug 4 Tribal/ Rural/ Nonprofit Focus: Reconnecting Communities Grant Program Overview (JR).
- j. Aug 8 August Mobility Management Meeting (CG, JR).
- k. Aug 9 RTS 2023 Meeting (CF, CG, BD, NC).
- I. Aug 9 RTS 2023 Sheraton Four Points (CF, CG, BD, NC).
- m. Aug 9 YMPO Presentation Review with Kimley Horn (CF, CG).
- n. Aug 9 Meeting with Mayor Nicholls (CF).
- o. Aug 10 ADEQ Unpaved Road discussion (CG).
- p. Aug 10 ADOT/YMPO Coordination Meeting (CF, PW, CG).
- q. Aug 10 RTS 2023 Pivot Point Conference Center (CF, CG, BD, NC).
- r. Aug 10 Avenue E/D Industrial Corridor Project (CF, CG).
- s. Aug 11 YMPO TAC Meeting (CF, PW, CG, BD, JR).
- t. Aug 11 YMPO Rail/Heavy Freight Agri-Business Public Engagement (CF, CG, BD, JR).
- u. Aug 11 STSP Safety-Related Data EA meeting (CF, CG, JR).
- v. Aug 11 YRBC Meeting (JR, PW).
- w. Aug 11 DC Staff of Senator Mark Kelly Re: Trade & other issues (CF).
- x. Aug 11 COG/MPO Planners August Meeting (CG).
- y. Aug 11 YRBC Board Meeting (PW, JR).
- z. Aug 12 YMPO TIP discussion (CG).
- aa. Aug 15 CTS Meeting (CF).
- bb. Aug 15 RTAC Advisory Committee Meeting (CF, PW, CG).
- cc. Aug 16 Yuma PM10 SIP Update Call (CF, PW, CG).
- dd. Aug 16 RTS Planning Meeting (CF, BD).
- ee. Aug 17 Economic Analysis Discussion with Kimley Horn (CF, CG).
- ff. Aug 17 Population Discussion with Hector Tapia (CF, BD).
- gg. Aug 17 YMPO Audit Planning Meeting Pun Group (BD, CF).
- hh. Aug 18 Community Resource Meeting (JR).
- Aug 18 WACOG Meeting with Brian Babiars, Director (BD, CF, PW).
- Aug 19 Az State Transportation Board Meeting (CF, PW).
- kk. Aug 22 RTAC Board Meeting (CF, CG).
- II. Aug 22 RCP Update (JR, CF, CG, PW).
- mm. Aug 23 RTS Planning Meeting (CF, BD).

- nn. Aug 24 2022 YMPO Audit Discussion (BD).
- oo. Aug 25 YMPO Executive Board Meeting (All).
- pp. Aug 29-Sep 1 League of AZ Cities and Towns (CF, PW).
- qq. Aug 29 RTS Planning Meeting (CF).
- rr. Aug 30 ADOT Freight Plan Freight Advisory Committee Meeting (CG).
- ss. Aug 31 P2P Workshop Southwest District (CG).
- tt. Aug 31 Yuma County's Regional Economic Development Meeting (CF)
- uu. Sep 1 COG/MPO Director's telemeeting at League Conf. (CF, PW).
- vv. Sep 7 ASRS Employer Conference 2022 (NC).
- ww. Sep 8 TAC meeting (CG, JR, NC, BD).
- xx. Sep 8 YRBC Meeting (PW, JR).

Mr. Gutierrez stated that the Progress Reports were stated as presented.

17. Adjournment

<u>Notice:</u> In accordance with the Americans with Disabilities Act (ADA) and Section 504 of the Rehabilitation Act of 1973, YMPO does not discriminate on the basis of disability in the admission of or access to, or treatment or employment in, its programs, activities, or services. For information regarding rights and provisions of the ADA or Section 504, or to request reasonable accommodations for participation in YMPO programs, activities, or services, contact Crystal Figueroa or Charles Gutierrez at 928-783-8911.

YMPO SUMMARY AGENDA ITEM 5 Off-System Bridge Program

DATE: October 6, 2022

SUBJECT: Off-System Bridge Program

SUMMARY:

The Arizona Department of Transportation (ADOT) Local Public Agency (LPA) Section is issuing a formal call for projects for the Off-System Bridge (OSB) Program for State Fiscal Year (SFY) 2023. Please distribute this message to your member agencies.

The Purpose of the Off-System Bridge Program is to fund the Design and/or Construction for replacement, rehabilitation, preservation, and protection of roadway bridges over waterways, other topographical barriers, other roadways, railroads, canals, ferry landings, etc. on bridges that are not on the Federal-aid highway system (local roads or rural minor collectors).

There are **two** separate funding programs available for use on Off-System Bridge Projects. The program type and eligibility for each program are described below:

SURFACE TRANSPORTATION BLOCK GRANT PROGRAM (STBG)

Eligible for Replacement, Rehabilitation and/or Strengthening:

The bridge must be classified as either "Poor" or "Fair" or having a load capacity rating that requires the bridge to be posted for weight restrictions based on the National Bridge Inspection Standards (NBIS).

Eligible for Preservation/Preventative Maintenance and Protection:

All bridges regardless of condition are eligible for Preservation/Preventative Maintenance or Protection measures.

BRIDGE FORMULA PROGRAM (BFP)

Eligible for Replacement, Rehabilitation and/or Strengthening:

The bridge must be classified as either "Poor" or "Fair" or having a load capacity rating that requires the bridge to be posted for weight restrictions based on the National Bridge Inspection Standards (NBIS).

Eligible for Preservation/Preventative Maintenance and Protection:

Protection activities as described above are also eligible to be funded under this program given that one of the above conditions or load capacity items are met.

Project Application:

- The application shall identify the requested Program Funding (STBG or BFP) the project sponsor wishes to apply for in the application form.
- Applications will require a description of work that includes purpose and need, scope of work, justification (system prioritization), schedule, and detailed cost estimates for Design and Construction phases. Entities submitting multiple

applications will need to regionally prioritize projects and submit justification for the selected projects.

Funding:

- Under the STBG Program, eligible project costs will be funded at 94.3% federal share with a 5.7% local match.
- Under the Bridge Formula Program (BFP), eligible project costs will be funded with 100% federal share and no local match is required.

Timeline:

- OSB applications are due back to the ADOT LPA Section no later than **December** 30, 2022.
- ADOT Selection Committee will review and prioritize all projects based on submitted applications and established scoring criteria January 2023.
- Eligibility determination letters will be sent to applicants (with a copy to the Regional COG/MPO) February 2023.
- Project Sponsors with projects selected can start working with their Regional COG/MPO to program the project into the Regional TIP as soon as program eligibility determination letter is received.
- Project Sponsors with selected projects may start working with ADOT LPA Section to initiate the project and start IGA process as soon as the project has been programmed in the Regional TIP.
- Funding for Development Activities such as consultant selection, Environmental, ROW, and Utility and Railroad consultations will not be available until after June 2023.

Attached are the Off-System Bridge Guidelines, application, and scoring criteria. Ensure that all OSB applications submitted to ADOT are on the attached application form.

All Off-System Bridge applications must be submitted through the Regional COG/MPO or the application will not be considered. This will ensure that each project will appropriately be considered for regional prioritization at the COG/MPO level before submission to ADOT.

More information about the OSB Program can be found on the ADOT LPA Section website at https://azdot.gov/node/15880.

If you have questions or need further information please contact Mark Henige, ADOT LPA Program Manager at (602) 712-7132.

Thank you,

Mark Henige Program Manager

Local Public Agency Section 205 South 17th Avenue, Room 291 Phoenix, AZ 85007

Office: (602) 712-7132 Cell: (480) 486-4216 mhenige@azdot.gov PUBLIC INPUT: No members of the public have commented on this to date.

TECHNICAL & POLICY IMPLICATIONS:

TECHNICAL: The RCP is part of a Mobility Management Program that varies, based on the needs of each region.

POLICY: FTA and ADOT require the development of a RCP as part of receiving funds for the 5310 Program.

ACTION NEEDED:

This item is on the agenda for review, discussion, and/or possible comment only at this stage.

YMPO SUMMARY AGENDA ITEM #6

Technical Advisory Committee (TAC) Officers

DATE: October 6, 2022

SUBJECT: Technical Advisory Committee (TAC) Officers

SUMMARY:

In May, YMPO was notified by Chris Young, City of Yuma that he could not attend the TAC meeting and please contact the Vice Chair. Since then, The City has replaced Chris Young with Dave Wostenberg P.E. The Vice Chair has since May 2022 taking the role of Chair; however, the Vice Chair is still the Vice Chair. There has not been any action to replace the chair or elevate the current Vice Chair.

A decision according to the Bylaws Page 5 directs as follows:

Section 2 VOTING

b) Elected officers of the TAC shall serve on a rotation basis, whereby, when the Chair's position is vacated, the Vice Chair assumes the position of Chair. The TAC must then elect another TAC member to serve as Vice Chair.

The YMPO TAC found out that Chris would not be returning and YMPO needed to find out from Eulogio Vera and the City as to what direction the TAC Chair is to fall to. I have included the yearly rotation for the last 15 years.

The rotation for the Executive Board is as Follows for the 2023.

Gary Knight City Council Member will assume the Chair position of the YMPO Executive Board.

	TAC CHAIR	VC				
2010	YC-Paul Melcher	SL-John Starkey				
2011	SL-John Starkey	SOM-Sam Palacios				
2012	SOM-Sam Palacios	COY-Joel Olea				
2013	COY-Joel Olea	WEL-Joe Grant				
2014	WEL-Joe Grant	YC-Roger Patterson				
2015	YC-Roger Patterson	SL-John Starkey				
2016	SL-John Starkey	SOM-Sam Palacios				
2017	SOM-Sam Palacios	COY-Jennifer Albers				
2018	COY-Jennifer Albers	YC-Maggie Castro				
2019	YC-Maggie Castro -August	SL-Eulogio Vera				
2019	SL-Eulogio Vera - September	WEL-Joe Grant				
2020	SL-Eulogio Vera - February	WEL-Joe Grant				
2020	WEL-Joe Grant -Interim - March	SOM - Sam Palacios				
2021	SOM-Sam Palacios- Feb	COY-Jeff Kramer				
2022	COY-Chris Young-End May	SL-Eulogio Vera				

ACTION NEEDED:

This item is on the agenda as information, discussion, and/or action A possible motion to elect a new Chair or elevate the Vice Chair, or to keep the Vice Chair as is an keep the City position with the City Engineer and elect Dave Wostenberg as the Chair to fulfill the remainder of the year.

CONTACT PERSON:

Charles A. Gutierrez, Senior Planning/Mobility Manager, 928-783-8911

YMPO SUMMARY AGENDA ITEM #7

Rail/Heavy Freight Study Update

DATE: October 6, 2022

SUBJECT: Rail/Heavy Freight Study Update

SUMMARY:

At the September 8, 2022 TAC meeting a recommendation went forth to the YMPO Executive Board on September 22, 2022 of Candidate C Alignment. This was given with caveats of language that will accompany the recommendation of mitigating issues if an investor is identified they will be required to mitigate the concerns of the region.

Since then, KHA has drafted the Working Paper 2: Alternative Analysis

The Working Paper 2 is divided into three main phases: Conceptual Alternatives, Candidate Alternatives, Recommended Alternatives.

These phases basically made the recommendation of Candidate C the recommended alignment of the TAC with language that will address the mitigating issues of the area of concern.

KHA will be presenting the Working Paper 2 in full details and prepare the TAC for the Working Paper 3: Economic Analysis that will be coming out in late October 2022.

There are decisions that require the TAC to make additional recommendations on Public Engagement/Open House methodology for the remainder of the study.

ACTION NEEDED:

This item is on the agenda as information, discussion, and/or action.

A possible motion to recommend the study enter into the Public Engagement phase and have an open house/public Meeting

CONTACT PERSON:

Charles A. Gutierrez, Senior Planning/Mobility Manager, 928-783-8911

Working Paper 2. Alternatives Analysis

1. Introduction

Project History and Overview

The Yuma Metropolitan Planning Organization (YMPO) is conducting a study to identify a preliminary alignment for a possible rail/heavy fright corridor in the Yuma region. The study builds upon the 2013 Yuma County Rail Corridor Study, which recommended multiple rail corridors options between Sonora, Mexico, and Yuma County. In addition, the study explored opportunities for freight-related economic development. Two of the study alternatives (Alternatives 6 and 7) collectively evaluated benefits of an industrial park near San Luis and a connection from the U.S./Mexico border north to the Union Pacific Railroad (UPRR) Sunset Route that runs roughly parallel to Interstate 8 (I-8). These two alternatives serve as the beginning point for this 2022 YMPO Heavy Rail/Freight Alignment Study.

Since completion of the 2013 study, the Yuma region has been increasingly pressured by development interests. Much of this new development activity is in the eastern portion of Yuma, adjacent to the unincorporated Yuma Foothills Area. Ongoing development activity places additional constraints on potential previously identified rail corridors.

Goals and Objectives

The 2022 YMPO Rail/Heavy Freight Alignment Study will build upon the 2013 analysis to define the rail corridor from the United States/Mexico border north to the UPRR. The study will identify a recommended location for a 500-foot-wide corridor, which could ultimately accommodate a freight rail facility as well as other utilities, which could co-locate within the rail corridor. Study objectives are:

- Review data, findings, and conclusions from previous plans and studies, including the 2013 Yuma County Rail Corridor Study.
- Update a commodity flow summary of existing and future freight movements by origin/destination, mode, volume, and value, with a focus on seaports in Mexico. The summary will identify economic trends and forecasts that would affect the YMPO study area.
- Identify border rail crossing opportunities that will accommodate anticipated freight flows from U.S./Mexico freight interests to the YMPO region.
- Establish the alignment for a potential regional freight rail connection between the U.S./Mexico border near San Luis and the UPRR. The freight line would support an efficient freight transportation network in Yuma County, promoting economic development. Currently, the City of Yuma and stakeholder agencies do not have the ability to preserve land for a new rail corridor because an alignment has not yet been documented. Corridor definition is necessary to allow for corridor preservation and pursuit of federal funding for construction of the rail spur corridor. The YMPO Rail/Heavy Freight Rail Study will set the stage for detailed environmental review and provide a basis for corridor preservation.
- Describe potential funding sources that may be available to implement the corridor. Summarize the
 project-level funding analysis and financing plan for the corridor using those funding sources deemed
 most viable by the project's stakeholders.

Study Area

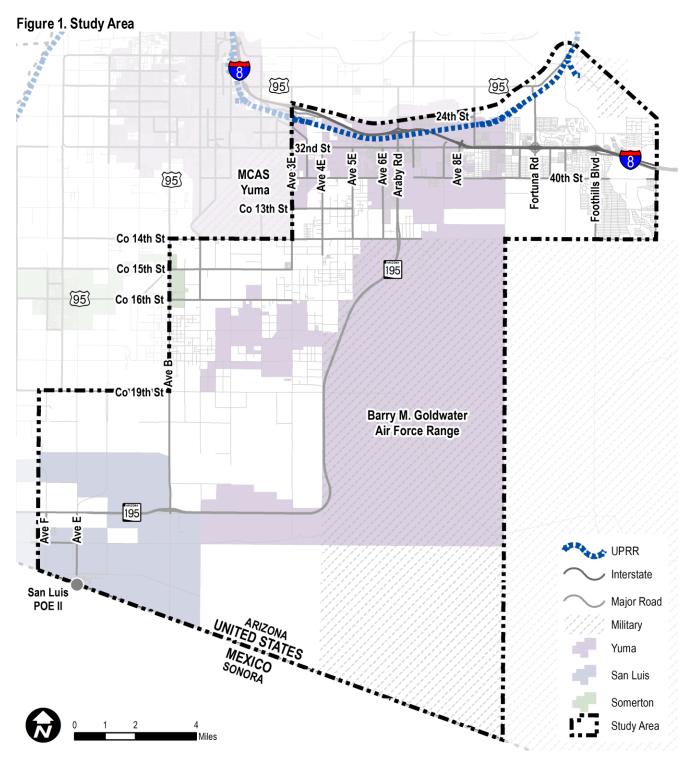

The study area is comprised of over 240 square miles and incorporates the eastern reaches of the Cities of Yuma and San Luis, a small portion of the City of Somerton, and portions of unincorporated Yuma County as shown in **Figure 1**. The study area is bounded by:

- The UPRR Sunset Route to the north.
- Avenue 15E in the Foothills area of unincorporated Yuma County and the eastern boundary of the City of Yuma in the Barry M. Goldwater Air Force Range (Goldwater AFR) to the east.

Working Paper 2. Alternatives Analysis

- Avenue 3E near Marine Corps Air Station (MCAS) Yuma, Avenue B near Somerton, and Avenue F near San Luis to the west.
- The United States/Mexico border to the south.

Working Paper 2. Alternatives Analysis

Working Paper 1 Review

Working Paper 1, entitled Current and Future Conditions, provides a comprehensive review of observable data present in the study area that have an impact on the viability and potential economic case of a north-south rail line. Major sections of Working Paper 1 include:

- Previous Plans and Studies. A review of pertinent recommendations from documents produced by YMPO, ADOT, or local agencies.
- **Stakeholder Engagement.** Findings from an initial round of stakeholder interviews with YMPO member agencies and other entities with a potential interest in a rail line.
- Freight Flows. A review of current and forecasted freight flows either starting or ending in Yuma County or traveling through Yuma County.
- **Transportation System.** A review of the existing multimodal transportation system in the study area as well as anticipated changes over the next 20 years.
- Future Land Use. A review of desired future land uses of YMPO member agencies present in the study area and whether those land uses are generally supportive or not supportive of a future rail alignment.
- **Environmental Overview.** An analysis of available environmental data that may impede the construction of rail in the study area.
- Rail Alignment Opportunities and Constraints. A summary of the existing and future conditions analysis that highlights opportunity and constraint areas for implementing rail.
- Rail Infrastructure Planning Scenario. Assumed standards (such as design speed, siding requirements, etc.) that were included in future phases of the study.

Working Paper 2 Overview

The Alternatives analysis is broken into three main phases, each with increasingly detailed analyses of potential alignment alternatives:

Conceptual Alternatives

- •Broadest group of potential alignments
- •Qualitative analysis of fatal flaws

Candidate Alternatives

- Smaller group of topperforming Conceptual Alternatives
- Quantitative analysis of potential impacts

Recommended Alternative

 Candidate Alternative (or combination of alternatives) with the most benefits and fewest impacts

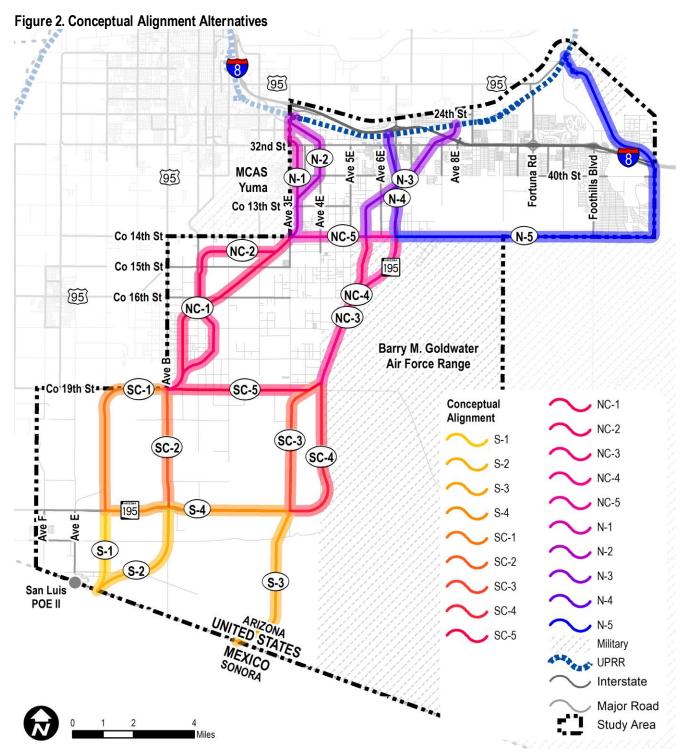

Working Paper 2. Alternatives Analysis

2. Conceptual Alignment Alternatives

Conceptual Alternatives

The following Conceptual Alternatives, shown in **Figure 2**, are the preliminary alternatives identified to meet the goals and objectives of the YMPO Rail/Heavy Freight Alignment study.

Working Paper 2. Alternatives Analysis

The process of identifying conceptual alternatives included the consideration of:

- Future land use maps from local municipalities and Yuma County
- Identified opportunities and constraints from the first round of stakeholder interviews and existing conditions research
- Existing or anticipated right-of-way availability

The Conceptual Alternatives were grouped into four categories geographically: South, South-Central, North-Central, and North.

South Alternatives

The South Alternatives are located in the portion of the study area that stretches from the U.S./Mexico border to the east-west section of SR 195. The four Southern alignment alternatives have connections to SR 195 right-of-way and provide access to Mexico just east of the San Luis II Border Port of Entry and through a site proposed for the Sonora Crossing Transmission Line Project.

- S-1 connects from the border just east of the San Luis II POE to SR 195 following the Avenue D alignment.
- S-2 connects from the border just east of the San Luis II POE to SR 195 following a future County 25th
 Street and Avenue B connection.
- S-3 connects from the Mexican border to SR 195 following the proposed alignment of the Sonora Crossing Transmission Line Project.
- S-4 offers connections between for the other South Alternatives via the SR 195 right-of-way

South-Central Alternatives

The five South-Central alignment alternatives provide options for connecting through the four-mile span between SR 195 and County 19th Street.

- SC-1 connects from SR 195 to County 19th Street via the Avenue D alignment, then turns eastward along the County 19th Street alignment to Avenue B.
- SC-2 connects from SR 195 to County 19th Street via the Avenue B alignment.
- SC-3 connects from SR 195 to County 19th Street just west of SR 195 following the proposed Sonora Crossing alignment.
- SC-4 follows the SR 195 right-of-way from the Sonora Crossing right-of-way to County 19th Street.
- SC-5 offers connections between the other South-Central Alternatives along the County 19th Street alignment.

North-Central Alternatives

The five North-Central alignment alternatives provide options for connecting through the five-mile span from County 19th Street to County 14th Street.

- NC-1 connects County 19th Street to County 14th Street via the B Main Lateral Canal right-of-way.
- NC-2 connects County 19th Street to County 14th Street via the A8-9 Lateral Canal right of way.
- NC-3 connects from the intersection of SR 195 and County 19th Street to County 14th Street west of Avenue 6E following the proposed Sonora Crossing alignment.
- NC-4 follows the SR 195 right-of-way from County 19th Street to County 14th Street.
- NC-5 offers connections between the other North-Central alternatives via the County 14th Street alignment.

Working Paper 2. Alternatives Analysis

North Alternatives

The five Northern Alignment alternatives connect from County 14th Street to the UPRR Sunset Line.

- N-1 travels from the intersection of County 14th Street and Avenue 3E, follows a north-south alignment just east of Avenue 3E until it intersects with an existing rail spur from the UPRR line.
- N-2 connects from the intersection of County 14th Street and Avenue 3E and follows the B Canal right-of-way to an existing rail spur from the UPRR line.
- N-3 follows right-of-way obtained by APS for a new transmission line now under construction that connects from County 14th Street west of Avenue 6E and follows the Gila Gravity Main Canal to the UPRR line.
- N-4 follows the SR 195/Araby Road alignment from County 14th Street to the UPRR line.
- N-5 connects from the intersection of SR 195 and County 14th Street to the east following the County 14th Street alignment to Avenue 15E where it turns northward and crosses I-8 to connect with an existing rail spur from the UPRR line near Rifle Range Road.

Conceptual Alternatives Screening

The screening process for the Conceptual alternatives is made up of three primary sources: TAC and stakeholder input, public input, and a high-level technical analysis to identify fatal flaws.

TAC and Stakeholder Input

The Project Team engaged regional stakeholders for the second time during this planning process to obtain specific input on the Conceptual Alternative alignments. Interview groups and dates are shown in **Table 1**. Summaries of each of the stakeholder meetings is provided in **Appendix A**.

Table 1. Stakeholder Meeting Groups

Group	Agencies/Positions	Interview Date
Arizona Farm Board	Director	June 6, 2022
Yuma County	Development Services, Multimodal Planning, County Engineering	June 8, 2022
City of San Luis	Public Works, Economic Development	June 8, 2022
City of Yuma	Multimodal Planning, Utilities, Economic Development	June 8,14, 2022
Economic Development	Greater Economic Development Corp., YMPO	June 8, 2022
MCAS Yuma	Community Planning Liaison, Air Station Command	June 9, 2022 and July 13, 2022
ADOT	Planning	June 1, 2022
Other Mexican Stakeholders	Agency for the Promotion of Economic Development	June 15, 2022

Key takeaways from each of the stakeholder interviews include:

ADOT

- This study will need to be aware of the environmental conditions/constraints that ADOT addressed during the design concept phase of the SR 195 corridor implementation assessment process
- The study will also need to be aware of all existing and proposed major utility corridors within the area under review for a new heavy rail facility
- Heavy rail connectivity to a new deep-water port along the west coast of Mexico had been considered in the past, however this linkage has not been resurrected by the current administration in Mexico

Working Paper 2. Alternatives Analysis

- Land south of the airport and agricultural fields near that area appear to be more feasible
- Southern alignments are less problematic, but the "North Central" and "North" routes would have issues as they segment the denser residential areas.
- o ADOT didn't identify any other routes that should be introduced to the preliminary concepts
- Pushback should be expected from the Air Force Range due to encroachment from eastern running Conceptual Alternatives.
- ADOT felt eastern running alignment is more feasible, but discussion for potential on the west of the 195 should be considered.

Arizona Farm Board

- Standards for construction and train operations near produce crops, need to be researched and applied
- o An alignment along the eastern border of the study area would be preferred to avoid agriculture
- Supportive of (S3, SC4, NC3, NC4, N5) as an alignment

• Yuma County

- Based on previous experience, a corridor along Avenue E is unlikely to receive environmental clearance or joint right-of-way acquisition
- The S3 corridor runs through South County Landfill parcels that are planned to be developed for industrial use
- o Bureau of Reclamation (BOR) is unlikely to grant

City of San Luis

- o Main priority for the City of San Luis for this project is the Mexico connection point
- The S3 corridor is currently being considered for an electric powerline project (Sonora Crossing). There could be potential for right of way or permit partnering.

Economic Development

- Avenue E has residential development coming in near future which will be a hindrance to rail construction.
- o Recommend alternatives along SR 195 away from residential and farmland.

MCAS

- The eastern alignments seem to be on MCAS right of way and are undesired
- Representatives of MCAS have made it very clear that eastern alignments that use bombing range right of way are infeasible.
- There are concerns for types of materials being transported via train near the bombing range and how incidents involving hazmat or derailment will be exasperated due to the proximity of the bombing range.
- o MCAS not only owns the right of way near the conceptual alternatives but the air rights as well.
- Orphaned parcels near conceptual alternatives NC4 and NC3 have ordinances buried within them and would require extensive precaution measures and studies to allow any construction.
- Would prefer alignments most west running of the bombing range.

City of Yuma

- The N5 alternative negatively impacts state lands and the residents near that alignment are very vocal when in opposition of proposals.
- Gowan Milling and Yuma County Cotton Gin are concerned about conceptual alternative corridors disturbing operations.

Working Paper 2. Alternatives Analysis

- Utilizing 4E Street or 4 ½ E could have less impact on developed areas
- There is expected pushback from agriculture landowners for alternative corridors that utilize farmland.
- o MCAS has concerns for impacts and potential development

Mexican Stakeholders

- Interest from Mexican stakeholders has been very positive, development near the American border garners interest in future freight possibilities as well as more southern connections in Mexico.
- The Agency for the Promotion of Economic Development known as OPRODE in Mexico is a very interested stakeholder for this study however, turnover in the administration has made input meetings difficult to schedule and maintain. Once the administration personnel are solidified in their positions, more detailed input on the project will be feasible.

Public Input

Two in-person open house meetings were held, one in Yuma and one in San Luis, to allow the public to provide input on the conceptual alternatives. The San Luis public meeting was held on July 13th at San Luis City Hall and the Yuma Open House was located at the Yuma County Public Work Facility on July 14th.

In addition to the in-person open houses, a public survey was available virtually through the YMPO website and in-person at the open houses. The survey was available in both English and Spanish. The survey was available from July 6th to July 24th, 2022. A total of 262 surveys were received, 70 of which were paper surveys collected at the public open house and the remainder were submitted virtually through SurveyMonkey. The public survey results are summarized below.

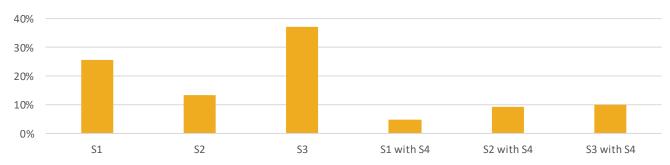

How supportive are you of a future freight rail corridor in the Yuma Region?

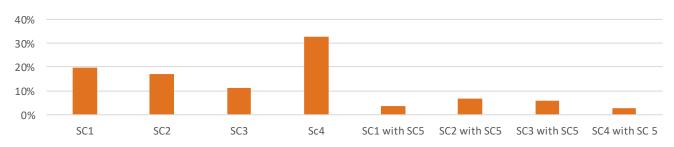

Working Paper 2. Alternatives Analysis

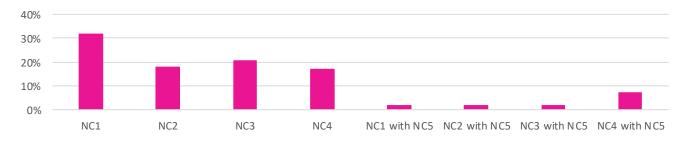

Which Southern Alternative do you feel would be best for a future rail corridor?

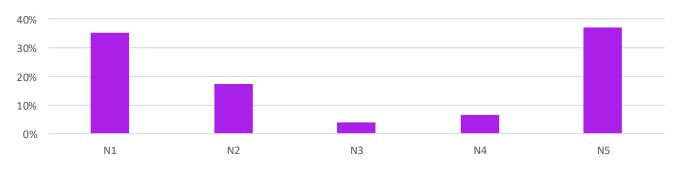

Which South-Central Alternative do you feel would be best for a future rail corridor?

Which North-Central Alternative do you feel would be best for a future rail corridor?

Which North Alternative do you feel would be best for a future rail corridor?

Detailed results from the survey and input received from the public through the survey and the YMPO project website are provided in **Appendix B**.

Working Paper 2. Alternatives Analysis

Screening Matrix Methodology

The Conceptual Alternatives were evaluated to identify those that are most suitable as an alignment for a possible rail/heavy freight corridor in the Yuma region. A high-level technical analysis was combined with the stakeholder and public input to identify fatal flaws with Conceptual Alignments that should be screened out before selecting Candidate Alternatives. This analysis included:

Land Use

- Land use compatibility
- Acres of public land impacted
- Acres of private land impacted
- Right-of-way availability

Roadway System Impacts

- # of classified road crossings
- # of local road crossings/closures

Environmental

- Historic property impacts
- Floodplain/waterway impacts
- Flat-Tailed Horned Lizard impact

Constructability

- Circuity
- UPRR connection geometrics

Political Feasibility

- TAC and stakeholder input
- Public input

Working Paper 2. Alternatives Analysis

Screening Matrix Results

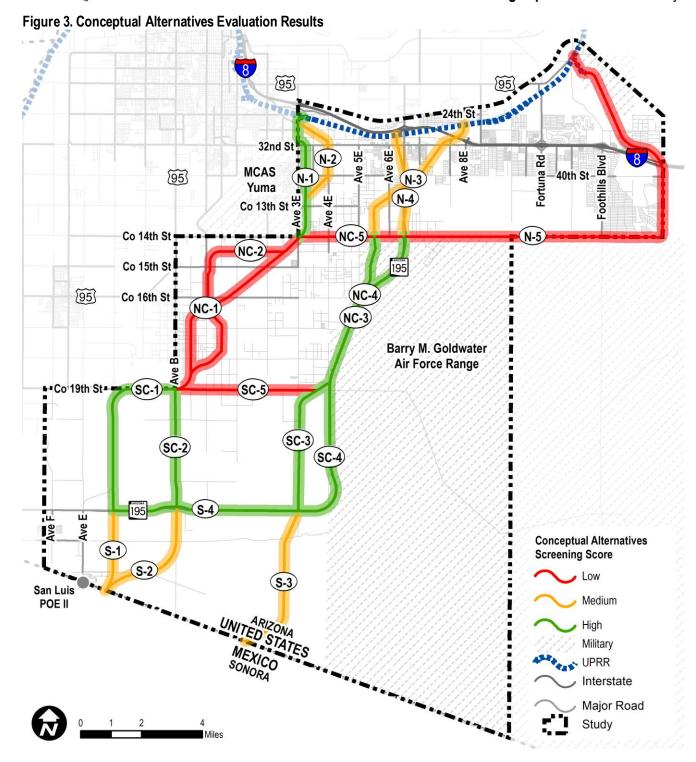

The assessment of Conceptual Alternatives was evaluated using the criteria categories of Land Use, Roadway System, Environmental and Constructability. The evaluation rated alternatives based on impact to the applicable category criteria with a score of poor (1), fair (2), or good (3). The scoring breakdown for each alternative is shown in **Table 2** and the results are shown graphically in **Figure 3**. Using these results, Candidate Alternatives were selected which went through a more vigorous technical analysis.

Table 2: Conceptual Alternatives Evaluation Matrix

	Land Use				tical				Roadway		Constructability			
Conceptual Alternative	Compatibility	Public Land Impact	Private Land Impact	Right-of-way Impact	TAC/Stakeholder	Public Input	Historic Property Impact	Floodplain/ Waterway Impact	Flat-Tail Horned Lizard Impact	Classified Road Crossings	Local Road Crossings	Circuity	UPRR Connection	Total
N1	2	1	1	2	1	3	3	3	3	3	2	3	3	30

S4	3	3	3	3	2	2	3	3	2	3	1	1	-	29

Working Paper 2. Alternatives Analysis

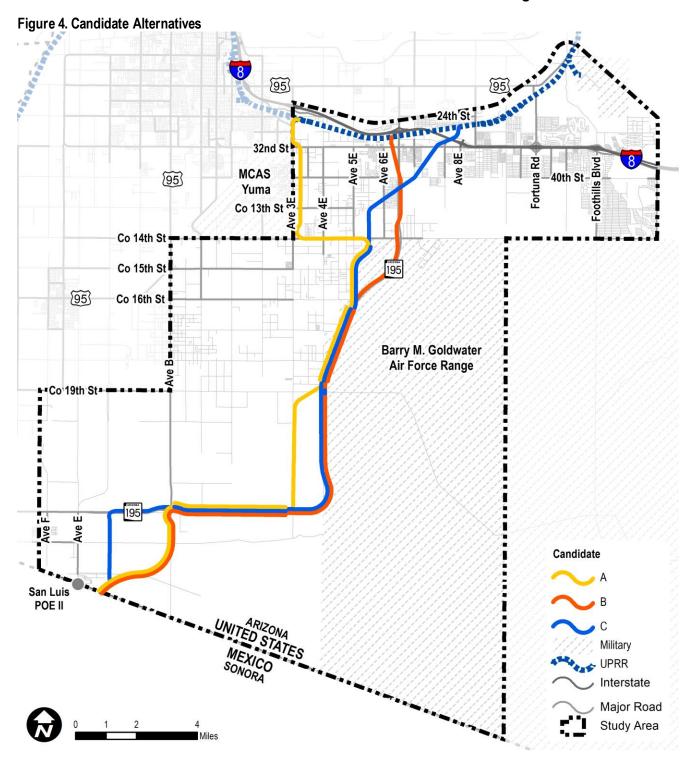

Working Paper 2. Alternatives Analysis

3. Candidate Alignment Alternatives

Based on the results of the Conceptual Alternatives evaluation, high-performing alignments were combined into three continuous Candidate Alternatives that run the entire length of the study area from the U.S./Mexico border to the UPRR Sunset Route. These Candidate Alternatives are shown in **Figure 4**.

Working Paper 2. Alternatives Analysis

Candidate Alternative Screening

Screening Methodology

A comparative analysis process was developed to quantify potential impacts of each of the three Candidate Alternatives. The evaluation criteria are listed in **Table 3**. Each of these criteria was quantified for the three Candidate Alternatives and then given a ranking of '1', '2', or '3' based on their relative impact (with '1' being the most preferable score and '3' being the least preferable score).

Table 3: Candidate Alignment Evaluation Criteria

Table 5. Calididate Aliginifett Evaluation Officeria								
Land Use								
Land Use Compatibility	 Number of residential units within ¼ mile of the alignment Acreage of protected open space and prime or unique farmland within 1,000' of alignment Percentage of alignment frontage that is currently vacant land 							
Compatibility with Planning Policies	 Percentage of alignment within a compatible zoning district Percentage of alignment within a compatible future land use 							
Land Acquisitions and	Land Acquisitions and Displacement							
Acquisitions Required	 Acreage of the parcels that would need to be acquired Number of structures that would need to be acquired 							
Transportation	Transportation							
Traffic and Safety Impacts	 Number of assumed roadway closures Number of assumed at-grade railroad crossings (safety focus) Vehicles impacted from at-grade railroad crossings Number of anticipated grade-separated crossings 							
Rail Operations	 Ease of connection to UPRR Number of opportunities for sidings Land availability for an inspection facility Track alignment geometry constraints 							
Environmental Impact	S							
Natural Environment	 Acreage of wetland impacted Number of historic sites impacted Acreage of flat-tailed horned lizard habitat impacted 							
Environmental Justice	Impact to Title VI populations							
Hazardous Materials	Number of contaminated/hazardous materials sites with ¼ mile of alignment							
Noise and Vibration	 Number of residential units, hotel beds, and hospital beds within 1,600' of alignment Number of residential units within 500' of alignment 							
Cost								
Cost	 Planning-level construction cost (cost per mile and grade seps). Planning-level right-of-way cost 							

Screening Results

A comparative evaluation of the candidate alternatives was conducted using the evaluation criteria outlined in **Table 3**. The three Candidate Alternatives were compared to each other across criteria and given a rating of 1, 2, or 3 to indicate better performing or more supportive candidates measured against one another. The

Working Paper 2. Alternatives Analysis

outcomes for each alternative were summarized and used to rank the alternatives. A summary of the results is shown in **Table 4** and more detailed descriptions are provided on the subsequent pages.

Table 4. Candidate Alternative Evaluation Matrix

ပိ		Planning-level right-of-way cost	\$71M	1	\$55M	3	\$57M	2
		Cost Subtotal		4		5		3
		Total		48		47		52

Land Use

- Land Use Compatibility. Criteria considered for land use compatibility included proximity of candidate alignments to residences and proximity to protected open space and prime or unique farmland. All three candidate alignments scored similarly with Candidate B scoring slightly lower than A and C. Candidate A scored the best in this category as the land uses adjacent are more industrial, but the score was also impacted negatively due to its impact to prime or unique farmland. Candidates B and C both scored lower in this category for their potential impact to residential land uses.
- Compatibility with Planning Policies. All candidates align well with compatibility of existing zoning districts with Candidate A scoring slightly higher. Candidate A also scored the highest with the alignment with future land use desired by YMPO member agencies. Candidates B and C scored similarly for both criteria with Candidate C having a slightly better score of compatible future land use.
- Land Acquisitions and Displacements. The Candidate Alternatives performed similarly on this criterion. All three require a similar amount of acreage to be constructed, so they scored similarly for the land acquisitions criterion. Candidate A is the only alignment that requires the acquisitions of any structures, so it performed the lowest on the displacements criterion.

Working Paper 2. Alternatives Analysis

Transportation

- Traffic and Safety Impacts. Criterion for traffic and safety impacts includes the number of assumed roadway closures, number of assumed at-grade railroad crossings, potential daily vehicles impacted, and anticipated number grade-separated crossings. Candidate A was the lowest performing alternative in in this area and Candidate C scored the best. Candidate C scored well due to the lower number of potential daily vehicles impacted, fewer at-grade crossings, and assumed closures.
- Rail Operations. Candidate C scored the highest on this criterion with the most opportunities for sidings as well as the most optimal availability of land for a future inspection facility. It also has the fewest geometry constraints. Candidate alignment A did score higher for its connection ability to the existing UPRR, but there are fewer opportunities for sidings and land availability for the inspection facility. It also has poor track alignment geometry in comparison to the other Candidate Alternatives. Candidate B has a less optimal connection to the existing UPRR and opportunity for sidings and scored the lowest overall.

Environmental Impacts

- Natural Environment. Candidate A and C scored similarly due to the low acreage of wetland impacted. None of the Candidate Alternatives impact any historic sites, causing them to all score evenly for the historic impact criterion. Candidate B impacts the least acreage of flattailed horned lizard habitat, resulting in it scoring the highest for that criterion with Candidate A and C scoring lower.
- Environmental Justice. Vulnerable population data was aggregated on the census tract level for analysis and observed within a quarter mile of the potential alignment. All three candidates scored similarly for the vulnerable population criterion. This is due to the low percentage of vulnerable populations near the potential candidate corridors.
- Hazardous Materials. No contaminated or hazardous material sites are within a quarter mile
 of Candidates A and B. This resulted in both candidate alignments scoring well with Candidate
 C scoring lower due to an identified leaking underground storage tank located within a quarter
 mile of the candidate alignment.
- Noise and Vibration. Candidate C has the least number of residential units, hotel beds, and hospital beds within 1,600 feet. Candidate B and C both scored similarly low for this criterion. Candidate C has the least amount of residential units within 500 feet of the alignment, scoring the highest for this criterion and Candidate B scoring the lowest.

Cost

Cost. Candidate A has the lowest planning-level construction cost at approximately \$213M whereas Candidate C has the highest at over \$320M. Candidates B and C have similar planning-level right-of-way costs at just under \$60M, while Candidate A has a higher right-of-way cost of over \$70M.

Public Input

At the request of the YMPO Executive Board, the Project Team held an extra in-person public meeting to engage the farming community within the study area who had expressed concerns about a north-south rail alignment's impact on Yuma County's valuable farmland. The meeting was held at the Yuma Civic Center on August 11th, 2022.

A formal presentation was given to the attendees that covered:

• What is a Planning Study? An explanation of planning studies in general, including that they look to evaluate alternatives and identify potential impacts of transportation investments. This section also

Working Paper 2. Alternatives Analysis

reinforced that the study does not look to persuade, but documents facts and analyses to inform future considerations.

- What Prompted this Study? A history of evaluating a north-south rail alignment in Yuma County and what has changed since the 2013 Yuma County Rail Study.
- **How Far Along is the Study?** Progress on the project to-date, the conclusions drawn from the Conceptual Alternatives screening, and the Candidate Alternative alignments.
- What are the Next Steps? The remaining steps in the project to come to a final recommendation.
- **Potential Future Project Steps.** Future steps that would need to be taken to advance a north-south rail alignment, including design, approvals, construction, and ongoing maintenance after construction.

After the presentation, a question-and-answer session was held to respond to any remaining concerns the attendees had. Key takeaways from the question-and-answer session include:

- Stakeholders expressed skepticism for the potential benefits of a fright rail project given the current
 land use and economic producers in the county, mainly agricultural production. The public was
 informed of potential economic development benefits coming from attracting industrial and logisticsbased employers to the region, which would both benefit the employees and local agencies through
 increased tax receipts.
- The use of eminent domain was expressed as a concern for landowners. The attendees were informed
 that the project currently has no funding source identified, and in the future, it is most likely that the
 project will be funded privately, given the nature of the project. It is rare that privately funded projects
 would be granted the power to use eminent domain.
- Attendees inquired why areas to the east or west of the study area hadn't been researched as potential corridors for the freight alignments. The public was informed that east of the study area the BMGAFR extends for a very long way, and the flat-tail horned lizard habitat is also more prevalent, which make that area highly infeasible. West of the study area the soil quality is too poor to support freight rail and the cost to reinforce the soil would make the project infeasible. Additionally, there would be even more farming, residential, and transportation system conflicts as it is more heavily developed along the US 95 corridor.
- Some attendees inquired why areas outside of Yuma County were not considered. The Project Team responded that the primary task of the study is to evaluate the feasibility of a north-south rail alignment serving YMPO member agencies. Extending the study area outside of Yuma County would lessen any potential benefits to the region and would not be worth exploring for YMPO or its member agencies.
- Stakeholders inquired if investment interest in Mexico exists to support the freight rail connection south
 of the US/Mexico border. The public was informed that Mexican stakeholders had been engaged at
 multiple points during the study process and that representatives from San Luis Rio Colorado and the
 State of Sonora have been very interested in pursuing further investigation of a rail alignment between
 the US/Mexico border and a Ferromex line that runs east-west south of San Luis Rio Colorado.

TAC Input

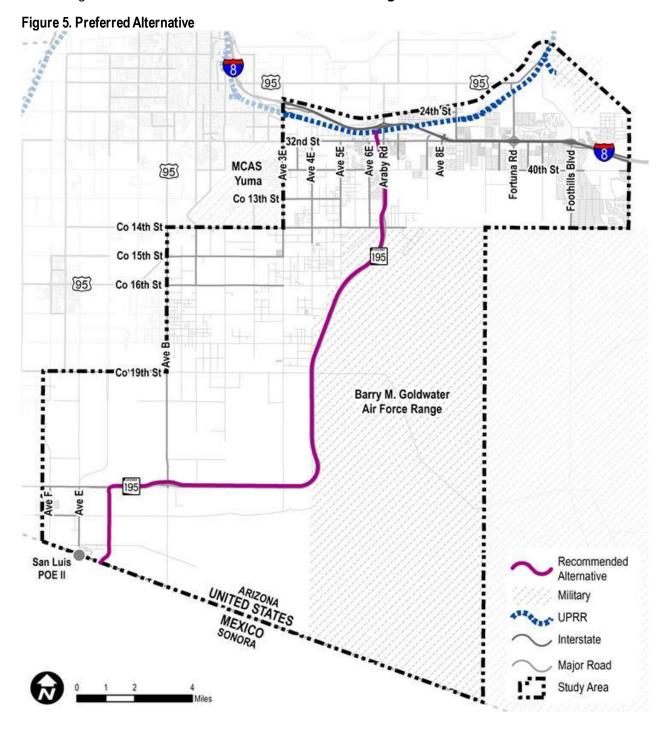

In the September 2022 TAC meeting, the TAC expressed their concern for the obstacles faced with the implementation of the Candidate Alternatives given the existing land use conditions and stakeholder inputs. The TAC agreed to acknowledge the Recommended Alternative resulting from the study but proposed conditional stipulation language be added to the recommendation stating the implementation limitations. The stipulation would acknowledge Candidate C as the recommended alternative resulting from the study as it performed the best in the Candidate Alternative screening process, but the alternative would not be considered feasible at the time of the study completion. In the future, Candidate C would be considered the Recommended Alternative, but specific conditions would have to be mitigated and or addressed to satisfy major stakeholder concerns before moving forward in the project implementation process.

Working Paper 2. Alternatives Analysis

4. Conclusions and Potential Future Project Phases

Recommended Alternative Alignment

The Recommended Alternative for a future north-south freight rail alignment is a slightly modified version of Candidate C. Candidate C was found to be the most feasible freight rail option based on the comparative alternatives analysis; however, the alignment at the far south end of the alignment was taken from Candidate B to avoid negative impacts to the Arizona State Prison Complex and future SR 195/Avenue B Traffic Interchange. The Recommended Alternative is shown in **Figure 5**.

Working Paper 2. Alternatives Analysis

The Recommended Alternative travels north from just east of the San Luis Port of Entry II and follows the Avenue D alignment to just south of SR 195 where it curves eastward to travel along the north side of SR 195. The alignment follows the north side of SR 195 until the road curves to the north, where it runs west of the SR 195 alignment to just north of County 14th Street. The alignment crosses to the east side of SR 195 just north of Co 14th St and runs along the east side of SR 195/Araby Rd until 40th Street where it crosses SR 195 again and follows a northwesterly path until it intersects with the UPRR ½ mile west of the SR 195/Araby Road underpass.

A 500-foot corridor has been identified as the location of the Recommended Alternative; however, the actual right-of-way requirement would only be 100 feet for the majority of the alignment. The 500-foot corridor would need to be studied in further detail in future phases of the project to determine the ideal location for the 100-foot right-of-way within the 500-foot corridor. A detailed series of maps showing the 500-foot corridor is provided in **Appendix C**.

Public Meeting Feedback

[To be completed after November Public Meeting]

Conditional Feasibility

For the Recommended Alternative to advance through the project development process in the future, there are several potentially fatal flaws that would need to be addressed:

- The Recommended Alternative would need to obtain an easement through the Goldwater AFR for much of the alignment along SR 195. MCAS is currently not supportive of implementing rail on the Goldwater AFR property, so additional engagement and detailed mitigation strategies for their concerns would need to be developed during the initial design phases of the project.
- The concept of a north-south rail line in Yuma County received largely negative feedback from the public through the multi-step public engagement process conducted during this study. For the project to move forward, efforts to mitigate negative impacts of rail, such as noise, vibration, or access issues, will need to be mitigated to the satisfaction of nearby property owners.
- Additional coordination with stakeholders in Mexico will be needed to determine a final crossing point
 of the US/Mexico border as well as assurances that the rail will be continued in Mexico to reach either
 the Ferromex line in Sonora or, ultimately, a new or expanded seaport on the Pacific Ocean to provide
 a viable alternative for freight bypassing California.

Inspection Facility Evaluation

In addition to the infrastructure and right-of-way requirements for the Recommended Alternative mainline, additional infrastructure and land will be required for a border-related inspection facility. Rail cars from Mexico are required to be inspected within 35 miles of the US/Mexico border; however, most rail inspection and intermodal facilities are located within 10 miles of the border.

The specific size parcel typically needed for this international inspection facility is dependent on the number of rail cars, trucks, and lifts. Generally, these facilities tend to be approximately 230 acres in size – approximately 10,000 feet long by 1,000 feet wide running parallel to the mainline track. Parcels along the Recommended Alternative alignment were reviewed to determine if any appear to be suitable for development into the international inspection facility. A location along the east-west portion SR 195 was identified as the most suitable location for an inspection facility. Two parcels appear to be able to easily accommodate the inspection facility as shown in **Table 5** and **Figure 6**, one owned by the City of Yuma and one by the US Bureau of Reclamation (BOR). A portion of either of these parcels could be acquired for the inspection facility; in general, obtaining land from the City of Yuma would be more feasible than acquiring land from the BOR.

Working Paper 2. Alternatives Analysis

Table 5: Inspection Facility Opportunities

Parcel ID	Acreage	Use Code	Primary Use	Ownership
22800011	597.36	9700	Municipal, Vacant Land	City of Yuma
22800003	3,400	9400	Federal, Vacant Land	US Bureau of Reclamation

Figure 6. Inspection Facility Opportunity Parcels

Intermodal Facility Evaluation

To transfer cargo between the Recommended Alternative, which will likely be operated by a short line railroad company, and UPRR or trucks that will take cargo to its final destination, an intermodal facility will need to be constructed. The specific size needed for an intermodal facility is dependent on the number of rail cars, trucks, and lifts. Generally, 50 to 100 acres would be required to adequately house an intermodal facility. A review of parcels or groups of parcels along the UPRR within a reasonable proximity to the connection with the Recommended Alternative was performed to identify potential sites that could accommodate an intermodal facility. Three alternatives were identified:

- Area 1. The area south of UPRR surrounding the connection point between the Recommended Alternative and the UPRR
- Area 2. The area south of UPRR between I-8 and the Agua Viva Water Treatment Facility
- Area 3. A location in Wellton north of I-8 and the UPRR and just west of Avenue 45E

Area 1

Six parcels were identified, near the connection point between the Recommended Alignment and the UPRR, which are largely vacant or used to store vehicles. Details on these parcels are provided in **Table 6** and a map of the parcels is shown in **Figure 7**. Combined, the six parcels have a total area of 63.71 acres and provide direct access to both the UPRR and the Recommended Alignment. These parcels are located adjacent to SR

Working Paper 2. Alternatives Analysis

195 and very near I-8, providing strong connectivity to the regional truck network. Four of the five privately owned parcels have a single owner, theoretically allowing for easier acquisition of the property.

Table 6. Potential Intermodal Facility Area 1 Parcels

Parcel ID	Acreage	Primary Use	Ownership
69732002	4.14	Vacant Land, Undetermined Use	Private*
69732004	4.82	Vacant Land, Undetermined Use	Private
19704022	15.71	Agriculture, Field Crops	Private*
19704019	5.28	All, Limited Use Property	UPRR
19704020	10.71	Commercial, Automobile/Truck – Sales Storage Lot	Private*
19704021	23.05	Commercial, Office Building – one story	Private*
	63.71	Total Acreage	

^{*}Parcels owned by the same owner

Area 2

Three parcels located south of UPRR between I-8 and the Agua Viva Water Treatment Facility were identified as another possible location for an intermodal facility. Details on these parcels are provided in **Table 7** and a map of the parcels is shown in **Figure 8**. This site was also identified during the first round of stakeholder meetings as a potentially viable location for an intermodal facility. These parcels are currently vacant, are large enough to accommodate an intermodal facility (with a combined total acreage of 103.09 acres) and are located near the I-8/Avenue 8½ E traffic interchange, which can provide direct access to the regional truck network.

Several constraints of the Area 2 site were identified. The largest parcel has a large pit in the middle which would need to be filled in, adding to the cost of constructing an intermodal facility on this site. There is no direct roadway access to the site; access would likely also require acquisition of a portion of the parcel on the south side of the canal that forms the southern boundary of the site as well as construction of a bridge over the canal itself, adding to the expense of the facility. Additionally, because the site is located approximately 1.5 miles east of the connection between UPRR and the Recommended Alternative, an agreement between the future short line operator and UPRR would need to be accepted by both companies to allow the short line operator to use UPRR's track in this area.

Working Paper 2. Alternatives Analysis

Table 7: Potential Intermodal Facility Area 2 Parcels

Parcel ID	Acreage	Primary Use	Ownership
69816002	9.7	Vacant Land, Undetermined Use	Private
69824001	10.04	Vacant Land, Undetermined Use	Private
19702001	83.35	Government, Federal Vacant Land	Federal
	103.09	Total Acreage	

Figure 8. Potential Intermodal Facility Area 2 Parcels

Area 3

Four parcels were identified in the 2013 Yuma County Rail Plan that designated an area in Wellton for an industrial park. This site is located north of I-8 and the UPRR and west of Avenue 45E. Details on these parcels are provided in **Table 8** and a map of the parcels is shown in **Figure 9**. In total, these parcels combine to 195.51 acres. While not located in the direct proximity of the recommended alignment, this location is adjacent to the existing UPRR and near to I-8, allowing for adequate access to the regional truck network. Three of the four parcels are owned by a local utility company, with the remaining parcel being owned by a separate private owner.

A constraint of rail access to the identified parcels is that US 80 runs east-west between the UPRR and the site, meaning additional at-grade railroad crossings will be required. Additionally, this site is located roughly 45 miles east of the connection point between the Recommended Alternative and the UPRR, meaning an agreement for the short line operator to run service on UPRR will be required.

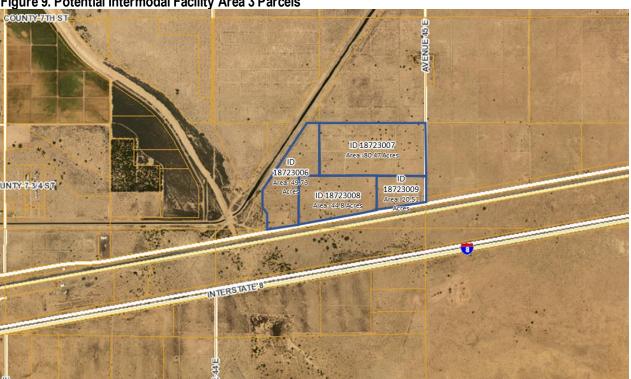

Working Paper 2. Alternatives Analysis

Table 8. Potential Intermodal Facility Area 1 Parcels

Parcel ID	Acreage	Primary Use	Ownership
18723006	49.73	Vacant Land, Undetermined Use	Private
18723007	80.47	Vacant Land, Undetermined Use	Private
18723008	44.8	Vacant Land, Undetermined Use	Private
18723009	20.51	Vacant Land, Undetermined Use	Private
	195.51	Total Acreage	

Figure 9. Potential Intermodal Facility Area 3 Parcels

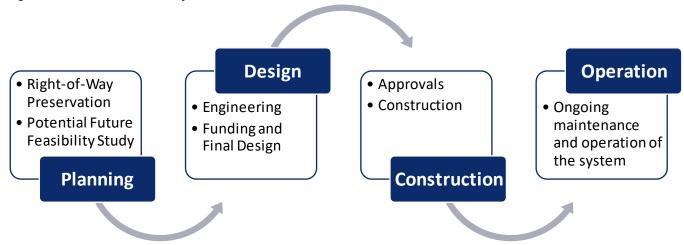

Potential Future Project Phases

With a Recommended Alternative in place, YMPO and its member agencies can properly prepare for a project in the future when conditions and opportunities are right. A summary of the steps that would need to occur between this feasibility study and construction of a north-south rail alignment is shown in Figure 10. Each of these major phases are multi-year processes. If the project development process were to continue, it would likely take upwards of 10 years before construction would take place.

Working Paper 2. Alternatives Analysis

Figure 10. Potential Future Project Phases

Planning

- Right-of-Way Preservation. Now that the 500' corridor for the Recommended Alternative has been established, YMPO member agencies should ensure that new development that would prevent use of this corridor for a future rail alignment does not receive a permit.
- Potential Future Feasibility Study. If right-of-way is not preserved or circumstances in the county change drastically from the existing conditions documented as part of this study, a follow-on feasibility study may be warranted if the Recommended Alternative becomes infeasible due to constructability constraints.

Design

- Engineering. If the previously stated issues with public acceptability, MCAS objections, and assurances of stakeholders in Mexico are addressed, preliminary engineering could begin on the Recommended Alignment. The first phase of design would need to identify the specific right-of-way needs within the 500-foot corridor identified in this study and do more detailed hazard avoidance and impact mitigation investigation.
- Funding and Final Design. Identifying investors and a short line rail operator would be a critical step in the implementation of the Recommended Alternative as the project construction will likely need to be privately funded. Once investors are committed, final design of the rail alignment can proceed.

Construction

- Approvals. After final design is complete, approvals from a variety of entities will need to be acquired, including state and federal environmental approvals and local planning and zoning approvals.
- Construction. If all the required approvals are obtained, right-of-way would need to be negotiated and purchased. Only after all of the preceding steps can construction of the rail alignment begin.

Operation

Ongoing Maintenance and Operation of the System. After construction, the short line rail operator will operate the system in conjunction with an operator in Mexico on the portion of the line that continues south of the US/Mexico border. They will also be required to fund and perform routine maintenance and respond to community complaints along with their investors. They will also need to coordinate with UPRR for the transfer of cargo to and from the short line.

Working Paper 2. Alternatives Analysis

Appendix A. Stakeholder Engagement Summaries

Arizona Department of Transportation

Stakeholder	Position	Interview Date
Bruce Fenske	Southwest District Administration	May 25, 2022
Mark Hoffman	Govt. Relations & Outreach Manager	June 1, 2022

Key takeaways and considerations resulting from discussions with ADOT Stakeholders include:

- Residents located in newer subdivisions along NC-1 and NC-2, may have issues with the construction/operation of a heavy rail facility along either of those routes
- N-1/N-2 have industrial uses (packaging plants) located within that area
- N-1/N-2 may also have a potential for adverse impact(s) to MCAS Yuma
- N-3/N-4, along the I-8 corridor, traverse the booming residential area in the Yuma Foothills region
- Construction of a new heavy rail facility along the canal alignment (N-3), will cause great concern to the owners/customers of the canal
- N-5 Alternative may have a new east-west collector or arterial roadway extension along the County 14th Street alignment to serve continuing growth and development
- N-5 and the north-south crossing of I-8 could be the easiest way to connect to UPRR Sunset Route Mainline, potentially the alternative with the least amount public resistance
- N-4 alignment had a lot of resistance in the past in relation to the construction of additional roadway capacity improvements, stakeholders along this alignment will likely not be in favor of a new heavy rail facility
- NC-1/NC-2 along with SC-1/SC-2 traverse heavy concentrations of long-time agricultural uses and newer residential subdivisions
- A new heavy rail facility following NC-1/NC-2 & SC-1/SC-2 alignments will receive mixed reviews from agricultural stakeholders
- NC-1/NC-2 and then transitioning to NC-5 will need to adhere to ADOT access control limits/restrictions when the alignment crosses the SR 195 facility, anticipate having a bridge structure to cross over ADOT's ROW
- If you follow S-2 to S-3 with a linkage to S-4 on the east side, you could avoid the need for a bridge to cross the SR 195 Surface Area Highway
- DOD leadership representing the Barry M. Goldwater Air Force Range will likely prefer locating the heavy rail facility along the west side of SR 195 (SC-4, NC-3, and NC-4), since they have some land on the east side of the highway, but not much
- This study will need to be aware of the environmental conditions/constraints that ADOT addressed during the design concept phase of the SR 195 corridor implementation assessment process
- The study will also need to be aware of all existing and proposed major utility corridors within the area under review for a new heavy rail facility
- Currently, Avenues D and E are under review/consideration for a new arterial facility to serve growing N/S travel demand
- SC-2 follows the Avenue B alignment, and this existing roadway is the primary N/S roadway in that area, serving a large amount of agricultural land
- SC-5 traverses agricultural land until you get to SR 195
- If closer to the San Luis II POE, could use monorails/truck traffic to move trailers to/from railroad
- Heavy rail connectivity to a new deep-water port along the west coast of Mexico had been considered in the past, however this linkage is not a priority of the current administration in Mexico
- The San Luis II POE and land just east of the agricultural fields may need to be avoided, land south
 of the airport and agricultural fields near that area appear to be more feasible

Working Paper 2. Alternatives Analysis

- Southern alignments are less problematic, but the "North Central" and "North" routes would have issues as they segment the denser residential areas.
- N5 alignment would be the best, followed by N3 and N4 on the northernmost part of the study area (the chilling plant may have some operations that might halt some western routes), but if there was intent to serve local businesses, the western routes could be more suitable.
- Mark didn't identify any other routes he thought should be introduced to the preliminary concepts
- ROW may be an issue (in ROW or outside ROW) would be a concern
- Pushback expected from Barry M. Goldwater Air Force Range on encroachment SC4, NC3 and NC4
- Mark felt an alignment on the east side would be more feasible, but discussion for potential on the west side of SR 195 should be considered
- N5 north of I-8 has a point where the alignment would be in a wash between two existing developments, this could be an issue
- Mark discussed the new rail line as a regional service that would tie into larger rail lines for distribution
- Potential for an alignment to the east of the Gila mountains suggested by people looking for routes that connect near Welton, which would bypass Yuma entirely
 - o These people are not interested in serving Yuma
 - "Alignment" would go through the bombing range
- GYPA and other agencies had meetings regarding a monorail that could take containers from the POE to another intermodal facility to the north
 - No alignment suggested
 - Above ground in theory
- Paul likes the alignments, and the thought process that went into choosing said alignments

Arizona Farm Board

Stakeholder	Position	Interview Date
Ana Kennedy	Govt. Relations & Outreach Manager	June 6, 2022

Discussion of opportunities and constraints included:

- Standards for construction and or future train operations near produce crops should be investigated.
- The Project Team requested guidance that could delineate which farmlands are dedicated (even half the year) to producing crops for human consumption. A GIS shapefile or a map or a drawing.
- Support the conceptual alignment routes furthest to the east (i.e., S-3, SC-4, NC-3, NC-4, and N-5)
 - Keeping the railway along the eastern alignment avoids the agricultural areas where produce is grown. The options avoid food safety/rail crossing issues.
- Kimley Horn had questions specific to special precautions or required distance along the rail lines, as well as visual guide delineating farmland from the Arizona Farm Board. However, the Board members did not delve into these topics because of their preference for the easternmost alignments.
- The Board members noted that alignments on the west end of the study area created serious concerns for growers in the area.
- The board expressed that alignment S-3 is preferred to S-1 or S-2, as the location of the S-3 alignment helps reduce traffic congestions by keeping the truck and rail ports separate.
- Additionally, Paul Brierley, the acting Yuma County Farm Bureau President, plans to reach out to Robby Barkley, a grower who was heavily engaged in the earlier railway discussions, because of the proximity of the then proposed railway to a large portion of his farmland.

Working Paper 2. Alternatives Analysis

Yuma County

Stakeholder	Position	Interview Date
Craig Sellers	Director of Development Services	June 8, 2022
Jason James	Multimodal Planning Division	June 8, 2022
Francisco Sanchez	Deputy County Engineer	June 8, 2022

Key takeaways and considerations resulting from discussion with Yuma County Stakeholders include:

- Avenue E corridor is highly unlikely to get environmental clearance, or a joint right of way acquisition based on previous experience.
- South County Landfill parcels are going to be developed for industrial use (near S-3)
- BOR unlikely to give up any right of way for railroad dedication (effects any potential alignments along the canal system).
- Suggested we meet with Greater Yuma Economic Development Council.

City of San Luis

Stakeholder	Position	Interview Date
Eulogio Vera	City of San Luis, Public Works	June 8, 2022
Jenny Torres	City of San Luis, Economic Development	June 8, 2022

Key takeaways and considerations resulting from discussion with City of San Luis Stakeholders include:

- Where the line connects with Mexico is main priority.
- Along the S3 corridor there have already been outreach efforts made for the electrical powerline project, could be worth more investigation to gauge efforts and response.
- More research needed on the existing powerline that moves south towards the border from the SR 195 corridor. May be a permit already for this path.

Economic Development

Stakeholder	Position	Interview Date
Julie Engel	Greater Economic Development Corp.	June 8, 2022

Discussion of economic development opportunities and constraints within the study area resulted in key takeaways shown below:

- Avenue E has residential development coming in near future which will be a hindrance to constructing rail.
- Recommend alternatives along SR 195 away from residential and farmland.

Working Paper 2. Alternatives Analysis

Marine Corps Air Station

Stakeholder	Position	Interview Date
Mary Ellen Finch	MCAS Representative	June 9, 2022
Randy English	MCAS Representative	June 9, 2022
Ronald Kruse	MCAS Representative	June 9, 2022
Jonathon Gordon	MCAS Representative	June 9, 2022
Jeremy Pennell	MCAS Representative	June 9, 2022
Jeffrey Ruby	MCAS Representative	June 9, 2022
Antonio Martinez	MCAS Representative	June 9, 14, 2022
Bill Sellars	MCAS Representative	June 9, 2022

Discussion of opportunities and constraints along the border of the MCAS artillery range resulted in key takeaways shown below:

- The eastern alignments seem to be on MCAS right of way and are undesired
- Representatives of MCAS have made it very clear that eastern alignments that use bombing range right of way are unfeasible.
- There are concerns for types of materials being transported via train near the bombing range and how
 incidents involving hazmat or derailment will be exasperated due to the proximity of the bombing
 range.
- MCAS not only owns the right of way near the conceptual alternatives but the air rights as well.
- Orphaned parcels near conceptual alternatives NC4 and NC3 have ordinances buried within them and would require extensive precaution measures and studies to allow any construction.
- Would prefer alignments most west running of the bombing range.
- Better efforts to include MCAS on future study findings need to be made.
- The N5 conceptual alternative would not be feasible as it traverses trough planned housing developments associated with the air station.

City of Yuma

Stakeholder	Position	Interview Date
Jennifer Albers	Multimodal Planning Division	June 8, 2022
Jeremy McCall	Director of Utilities	June 8, 2022
Jeffrey Burt	Economic Development Administrator	June 14, 2022

Discussion of opportunities and constraints within the City of Yuma resulted in key takeaways shown below:

- 2022 City of Yuma plan is to develop spaceport in the area of Avenue A, adopted by council as public/quasi-public.
- S3 option has the potential to be the best location for entry into Mexico.
- There are State Lands negatively impacted by the N5 alternative to be considered
 - o Public is very vocal in the Fortuna Foothills near N5 alternative
- Existing SPUT near US95 could be used for N5 option
- Gowan Milling and Yuma County Cotton Gin are concerned about potential rail corridor development and disturbing their operations.
- Using 4E street or 4 ½ E could impact less developed areas
- There is more acreage available between 3E and 5E for stations along existing rail
- State Lands has holding north of I-8 where N5 option is being evaluated.

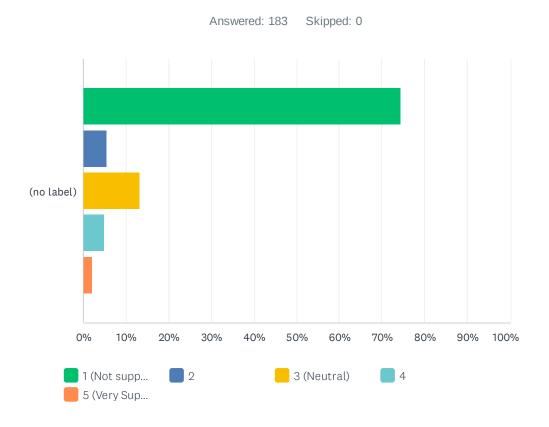

Working Paper 2. Alternatives Analysis

- 75 to 80 acres near Kyle and 30th Place, east of N2 option, would benefit from development with rail located in that region
- Agriculture owners may push back on railway development through their parcels.
- Agriculture fields east of Avenue 3E are mostly secured with established buildings and businesses
- There is a high sensitivity level, that has been elevated in recent years, due to discussion of potentially moving the fairground
- MCAS has concerns for impacts and potential development

Working Paper 2. Alternatives Analysis

Appendix B. Detailed Survey Results and Public Comments

Q1 How supportive are you of a future freight rail corridor in the Yuma Region?

	1 (NOT SUPPORTIVE)	2	3 (NEUTRAL)	4	5 (VERY SUPPORTIVE)	TOTAL	WEIGHTED AVERAGE	
(no label)	74.32% 136	5.46% 10	13.11% 24	4.92% 9	2.19% 4	183	1.0	00

#	COMMENTS:	DATE
1	I am not in support of anything that restricts traffic in Yuma. One of the great things about Yuma is that there is virtually no traffic. Also, I spent some time living in northwest Indiana where they had several of these railway Corredor's and traveling around town was absolutely awful and at times there were 30 minute delays. The only way they should even be considered is if the entire railway can be south of the city and then perhaps straight along the border fence. I live near a proposed route.	7/25/2022 3:50 PM
2	MY husband and I have NO wish to have a freight rail corridor in the Yuma region.	7/25/2022 12:51 PM
3	Absolutely not needed.	7/25/2022 2:31 AM
4	Traffic and noise mitigation have not been addressed.	7/25/2022 2:10 AM
5	When we first rented a lot in the Foothills, we asked the owner if there were any train noises with the answer being no. We have since purchased a lot and built our home in the nice quiet area a block from Avenue 15E. NO TRAINS!	7/25/2022 1:31 AM
6	I do not support this railroad because it should not be running near a growing residential/neighborhood area.	7/25/2022 12:53 AM
7	Not a good idea. Need more information	7/24/2022 9:15 PM
8	I have concerns about increased crimes and the type of railroad: either short line or UPRR	7/24/2022 8:45 PM

	main line, number of dedicated crossings, need for box car transfer freight terminals, safety of rail workers on line etc. Yuma doesnt have a train freight yard like Tucson. The cost to build one might be prohibited. There are also immigration concerns like have arisen on the short line from Nogales AZ to Tucxon, AZ.	
9	This is too near our neighborhood. Too dangerous and loud. This will devalue our homes and make it undesirable to buy here.	7/24/2022 7:22 PM
10	I don't want another train running near our neighborhood. Use the open desert.	7/24/2022 7:21 PM
11	You already have a existing rail line that runs to Mexico along the Levee by Colorado River. Update and use it	7/24/2022 7:13 PM
12	This will run directly behind my house! Certainly you can find a route away from neighborhoods!	7/24/2022 6:29 PM
13	The further out from town on either side would lessen the accidents that would happen at railroad crossings. Not to mention the noise going through neighborhoods. What were you thinking when you came up with this proposal? Not very much or very practical!	7/24/2022 6:08 PM
14	I am concerned with some of the facts I found on studies that where done for residential areas near rail road tracks specifically trains that produce diesel pollution, noise and un controlled rail crossings accidents and many more. Asthma A study completed by the Mayo Clinic measuring 3,970 people found asthma to be 40 to 70 percent more prevalent in children who lived near a railroad intersection. The pollution caused by the diesel engines permeate the air around the tracks and the homes in the nearby area. Train Track Dangers Railroad tracks are often not fenced in and many children have put themselves in danger when playing on or near the tracks. According to Operation Life Saver, "every three hours, a person or vehicle is hit by a train." Living in close proximity to railroad tracks increases the likelihood of your children walking near the tracks to get to or from school or when playing in the neighborhood. Look for tracks with fencing to ensure child safety around the railroad tracks. Cancer A study found those living near railroad tracks, especially those with high traffic volume, to have higher risk for cancer due to exposure to diesel pollution from the trains. Factors to consider are proximity to the tracks or station, volume of trains, and freight percentage. Each of the mentioned factors increases the risk. Traffic At most train intersections, a long line of cars will stop when waiting for a train to pass. These idling cars increase the pollution in the neighborhood and can contribute to impatient drivers and unsafe driving practices when the train does pass.	7/24/2022 5:35 PM
15	This is not good for housing values and safety in our communities	7/24/2022 4:45 PM
16	Without more information I question the negative impact on our growers & residential areas not to mention highways. The two recent information sessions were poorly advertised & offered limited info via storyboards. If YMPO thinks this is a viable project please schedule well publicized public meetings that would allow for questions & answers in a large enough venue to accommodate the crowd.	7/24/2022 3:47 PM
17	Should only be developed where there is no impact to current residential communities. We do not need the "710 Freeway" running through our backyards, especial with no direct economic impact to our community; as the funds will "pass by" us.	7/24/2022 3:34 PM
18	NO to N-4 because it impacts my travel and activities most. YES for N-5 because it least impacts my travel and life. NO to NC-2m NC-1, SC-1, SC-2 because they create additional opportunities for vehicle vs train accidents in this North Central and South Central road net that already sees many vehicle crashes at intersections with South County people just not paying attention. Yes to NC-4 & NC-3 because it stays near SR195 corridor. Yes to SC-3 & SC-4 because it stays near SR195 corridor. Prefer S-3 because it pulls traffic away from San Luis city congestion. Isolates illegal cross border traffic into more rural area.	7/24/2022 1:20 PM
19	The existing road infrastructure is already choked with traffic and adding more railroad crossings and intermodal freight traffic will clog up the system even more. Frequently hazardous materials in bulk quantities are transported via train. These tracks would push that material into residential neighborhoods and would cause increased risks and dangers to residents. What would Yuma get from this proposed line? How would Yuma benefit? It's commercial traffic going in and out of Mexico then to a transfer yard for distribution out. Yes there would be some (few) jobs created, but at what cost to the environment, neighborhoods, and communities.	7/24/2022 1:20 PM
20	Additional train traffics through residential neighborhoods is not something I support. Traffic is	7/24/2022 1:14 PM

already a concern at the crossings at 9E with school buses and residential traffic.

	,	
21	I live off Abe 8E. I feel a freight line running this close to a residential area, that is still expanding, would not be healthy to those residents all ready living there, but future residents that may choose to. This would lower our quality of life.	7/24/2022 12:55 PM
22	Anyway this is routed ruins someone's quality of life, and potentially our health with added pollutants. Hell no!	7/24/2022 12:33 PM
23	This project would effect the value of my home. The noise and distance from a railroad make a huge difference.	7/24/2022 12:24 PM
24	I can see it might be beneficial but do not want it anywhere near my proprty-would impact my property value negatively, and affect my health and lifestyle.	7/24/2022 12:04 PM
25	If there are to be train crossing highways, the safest equipment to keep motorist and pedestrians safe is an absolute must! ON ALL CROSSINGS!	7/24/2022 12:02 PM
26	This project will cause more unsafe areas in our city by crossing major streets. Property values will go down. Illegal immigration will increase and it's already high. Additionally, the noise and pollution this will cause for our city and agriculture is unacceptable. Do not do this to our city.	7/24/2022 11:54 AM
27	We do not want this freight line. Why cut up Yuma	7/24/2022 11:18 AM
28	N1 and N2 go very near to the Sun Leisure Estates community which I live in and we already have enough noise from the MCAS airfield, especially in March and September during training.	7/23/2022 3:05 PM
29	Yuma, and San Luis, needs industrial growth to provide good paying jobs for our citizens. Industry often needs rail service - and Yuma has lost industrial opportunities in the past due to lack of rail service. We have much land that is zoned industrial, especially around MCAS where other development is limited by the noise zones. Let's provide rail service to this land (Routes N-2 and N-1). Let's connect commercial and industrial in San Luis near their new port of entry (Route S-1) by rail to the mainline of the UPRR. And let's extend the rail line to the border and across so that maquiladora business can thrive in SLRC. Yuma's No. 1 need is better jobs - a rail line and the industrial growth that would accompany it go a long way towards providing those better jobs.	7/23/2022 1:06 PM
30	No thank you.	7/22/2022 8:23 PM
31	Yuma plays an extremely important role in feeding our nation, removing any agriculture land would play a major role with food insecurity. Each year there is less farm ground in Yuma County for growing vegetables with some of the most productive in the Yuma Valley. Another alternative between 3E and 5 E would be disastrous, as well, with the U. S. Marine base, airport, significant number of residential housing, and again a productive farm area.	7/22/2022 8:11 PM
32	I do not want a train that closevto my home.	7/22/2022 5:27 PM
33	I believe going with N-1 N-2 would be the best option as it will not interfere with local homes or subdivision in the proposed area.	7/22/2022 2:33 PM
34	I do not support any current version of this project.	7/21/2022 11:59 PM
35	The NC-1 and NC-2 and the S-1 and S-2 would destroy highly productive farmland.	7/21/2022 7:14 PM
36	Need better info before a truly informed comment can be voiced.	7/21/2022 7:07 PM
37	The concept is a giant waste of time. Mexico will never build rail to Yuma County's border. I realize we must plan ahead but we need to wait until Mexico actually begins construction then the chances of it becoming a reality will rise from 0% to 15%. We will be boarding cruise ships in Rocky Point well before this happens. lol	7/21/2022 5:11 PM
38	We as long time yuma, Arizona residents 23 years do not want to ruin our beautiful city by a stinking RR blocking traffic and disrupting our peace send it back to mexacali calif.another costly govt.trying to screw yumans.	7/21/2022 2:04 PM
39	Araby roundabouts do not support large container trucks. Araby has new hospital and major access to schools K through College.	7/21/2022 12:46 PM
40	Any route chosen will be very expensive to build. Why did you not include the old rail route that is on the levee and was operational until the mid 90's ? It extends to County 18th and would	7/21/2022 12:00 PM

	require only a few miles of disruption to existing property. It connects with the UPRR at there old downtown yard. You would eliminate having to go under I-8, and significantly reduce the need for road crossing's. Apparently I am not able to submit my opinion without selecting preferred routes. I will check the boxes but not in support of any route. Just as a way to submit my opinion. Michael Edgar	
41	The amount of lines that are purposed is extreme and goes through too many residential areas.	7/21/2022 11:35 AM
42	We don't need the mess and disruption. Also it will cause traffic congestion. Are RR crossings going to underpass's or overpass's? Put it somewhere else.	7/21/2022 11:19 AM
43	How many times do we have to say NO! There currently is nothing to transport by rail, previous studies by GYEDC have demonstrated that. Is the port in Mexico ever going to happen? Do you think letting it lie for 9 years and then bring it back will change anything? Kill it and forget it	7/20/2022 9:49 PM
44	ророр	7/20/2022 12:55 PM
45	Blah Blah blah	7/20/2022 12:54 PM
46	Depends on the final location of the rail corridor.	7/20/2022 11:46 AM
47	It would be very disruptive to agricultural production and resident travel, not to mention decrease home values.	7/20/2022 1:15 AM
48	But NOT NC2! It runs smack next to our Sun Leisure Estates development. We get enough noise from the air base. We should NOT have to put up with freight train noise as well! Please avoid going so close to residences. Thank you.	7/19/2022 9:24 PM
49	While I am open for the expansion of business to Yuma/Yuma county. I'm not supportive of taking or relocating businesses or home owners when there is already a service provided. In this case there is already a rail line that pretty much runs from the U.S./Mexico boarder. Located in the west county running north bound then east bound along the northern boundary of the city/county. This line already ties into the UPRR near the Ocean to Ocean bridge. It makes better business since to reuse this route. The land is already purposed for this situation. It wouldn't take as much to bring it up to modern standards.	7/19/2022 5:38 PM
50	No. No. No to all if it.	7/19/2022 2:39 PM
51	We don't support this project. Take it off the table.	7/19/2022 11:25 AM
52	Property values will suffer If a corridor must be built it should not be run through the city or it's rural communities.	7/18/2022 6:33 PM
53	I am all for commerce. However, commerce should occur in the most commercial zones. Commerce (trains) and residence's do not mix! Against plan N5	7/18/2022 5:57 PM
54	None of the proposed pathways near residential areas is a good option. You are going to rattle manufactured homes off their foundations.	7/18/2022 4:38 PM
55	Border security is paramount. No corridor should be considered until the border crisis is resolved and even then, a heavy rail connector should be located outside the metropolitan areas.	7/18/2022 4:33 PM
56	No one wants their property value destroyed by installing tracks through neighborhoods. There is enough open desert where there are not existing neighborhoods	7/17/2022 4:02 PM
57	I don't support this because it will devastate area farm land.	7/16/2022 2:09 AM
58	It is right next serval neighborhood and hundreds of families. Not only will be a noise factor, but not mention property will depreciate. The list go on from there.	7/15/2022 10:39 PM
59	There is already enough traffic, both rail and road, coming through Yuma	7/15/2022 1:52 PM
60	The Foothills is growing rapidly and in a good way. This proposed railway will be horrible for us residents and depreciate the value of our homes. I do NOT want this!	7/14/2022 11:42 PM
61	Freight rail will kill property values. The Foothills are growing in a good way and this will end that.	7/14/2022 11:36 PM
62	As a property owner, I am not for this at all. Thus, I am not choosing 'best choices' below, as	7/14/2022 9:05 PM

the only choice is a big NO to this idea. Most if us came to the foothills to get away from city life. Unfortunately, the city keeps trying to cram itself down our throats.

	ine. Officialities, the city keeps trying to crain usen down our throats.	
63	Terrible idea running heavy trains through these neighborhoods that I just bought an expensive retirement home in the serene foothills	7/14/2022 7:55 PM
64	These are residential areas.	7/14/2022 7:41 PM
65	just go ave F all the way north or just run it along the levee road. then just jump across freeway and connect in winterhaven ca.	7/14/2022 5:49 PM
66	The Foothills is for the most part residential, not commercial and I do not believe citizens want to have to listen to and deal with this in our area	7/14/2022 5:25 PM
67	N5 would impact the least, N4 would be 2nd choice. NC 3 &4 are about equal. SC4 seems the best way to connect S4 and then S2. This seems to equal the fewest crossings and disruption of vehicular travel.	7/14/2022 5:15 PM
68	This would be very noisy and intrusive to the homeowners here as we are no where near the tracks now and do not want to be either. Too many homes and outdoor activities in this area for this. Keep it on existing rails or away from homes that are not near tracks.	7/14/2022 4:21 PM
69	Will drop our property values.	7/14/2022 3:48 PM
70	I live off of 6e and DO NOT WANT THIS RUNNING PAST MY HOME	7/14/2022 1:53 PM
71	Routes are too close to residential neighborhoods	7/14/2022 1:37 PM
72	Not interested in having a freight line so close to my residence. Other routes can be created that will not affect so many home owners.	7/14/2022 11:23 AM

Q2 Which Southern Alternative do you feel would be best for a future rail corridor? You can select up to two.

ANSWER CHOICES	RESPONSES	
S1	30.00%	24
S2	17.50%	14
S3	43.75%	35
S1 with S4	5.00%	4

Comment: 1 7/24/2022

Unbeleivable! All involved in approving, purchasing, developing, selling, and buying finished homes near this proposed rail line should have been informed before they developed, sold, or purchased real estate anywhere near it. Had these plans been disclosed before I purchased my home at 7853 E 36th Place in 2018, I definitely would have looked and purchased elsewhere. Please consider your own reaction to news that a rail line was being considered in an area close to your own residence, before you propose the heavy freight/rail routes outlined to those who will have to live with the noise, traffic and all other aspects associated with implementation of this project.

Comment: 2 7/11/2022

Perhaps you should start with the findings of the 2013 study.

Present what the findings were with that study and build on that.

Any rail corridor should be outside any agricultural area or irrigation district.

Any rail corridor should be outside any residential area or potential residential area.

The result would be to locate on the BMGR and located as far east as possible.

Comment: 3 8/9/2022

As a property owner in the N5 region I am adamantly opposed to placing the proposed Rail/heavy freight corridor in this area. Not only will this proposal have a direct impact on property values, it will bring additional excessive traffic into an area that already experiences a massive influx of traffic during the winter months. Additionally, I am concerned about the increase in pollution and toxic chemicals into the area. Lastly, I find It conspicuous that Yuma County is holding public meetings during the summer months when 85% of the property owners are not available to attend.

Comment: 4 8/17/2022

I attended the August 11th community meeting regarding the Rail/Heavy Freight. After following along with the PowerPoint presentation and listening carefully during the question/answer period I have come to the conclusion that the benefits for our county and its citizens will not outweigh the concerns.

I plead with the YMPO Board and the county to drop this plan and NOT BUILD THE RAIL/HEAVY FREIGHT LINE.

Comment: 5 8/18/2022

Dear to whom it may concern, I highly oppose the new train. I do not want the train to run thru Yuma anywhere. It will disrupt traffic, farming and our irrigation systems. Please do our City a service and stop this train proposal.

Comment: 6 7/28/2022

I sent a message regarding route N1 and N2 close to Sun Leisure Estates. Please correct or edit my prior message that referred to N3. Thankyou

Comment: 7 7/21/2022

To the extent that the rail/heavy freight line enters the United Staes through the San Luis Port II vicinity, the rail way line should be routed through the Avenue C corridor or further east (Ave B). The east San Luis sub-market should see continued growth over the next five to 10 years and a rail/heavy freight line through or adjacent to Ave D will impede growth and cause quality of life issues adjacent to proposed residential neighborhoods.

Comment: 8 8/18/2022

Dear Sirs: I am writing as a Yuma native and concerned citizen regarding this railroad being built. I am totally against this decision. I have several friends and family who are connected with Agricultural companies. This is not a great idea. Who is funded this railway? How are we going to prevent drug cartel from having open door to transporting drugs across this train. Who will provide security that coyotes will use this transportation to import more illegal immigration. I am concern for railway staff safety too. We need to use our local farmers not import Mexico foods where there is no safety net of how it is processed. Thank you very much.

Comment: 9 8/15/2022

Would this be for citizen transportation or resource transportation?

Comment: 10 7/11/2022

I tried my best to use your form.

I recall at one point there was discussion of the old border/levy route – this still seem least disruptive other than going through the range on CO 24^{th} – CO 19 and all the way to Welton. Just seems like a super noisy thing to run through the heart of our community with very limited potential use – I would say SL 2 is a good example, doesn't get half the truck traffic that it was supposed to (thank goodness).

I live by CO 14th and Araby (195) I want it as far away from me as possible.

Last thing – if constructed, it must have sound walls – especially if going down 14th and 195s.

Comment 11:

7/7/2022

The Yuma Metropolitan Planning Organization is conducting OPEN house for the Rail/Heavy Freight Alignment Study. We are looking at alternative options for a possible north-south rail from Mexico to the US UP RR line I would like to call in or come in and talk about it briefly. The open house engagement are July 13 & 14 South County and Yuma

Comment 12:

7/17/2022

The online survey for the train tracks is very unfair. On the paper survey, we are able to choose not supportive and choose none of the proposed tracks. But on the online survey, they are forcing us to choose at least two of the proposed routes. I told them at the open house that they needed to change it to either let people leave them blank or to have an option that says none, But they haven't done so. There are many mad people that want to fill out the survey online without supporting any of the tracks but the survey is not fair and it's not letting them choose the correct answer. Is there anyway that you can contact the gentleman that you interviewed and

ask him to make the change? I have left him a voicemail at his office, but he probably won't get that until Monday. Thank you.

Comment: 13 7/21/2022

Please keep the railway away from the canals. Derailments happen more frequently than many think and one near a canal would pollute the water or damage the canal, thereby destroying crops by polluting the soil (perhaps permanently) before the water could be shut off and/or through dehydration in the case of mere damage. Contaminated water could also flow into Mexico, creating more issues.

Comment: 14 7/12/2022

I am very unhappy with the proposed N5 route for a railroad spur. We purchased our home on Onammi Ave with the knowledge that 15E bordered state land and BLM land and that County 14 bordered the Barry Goldwater Range belonging to the Military. We currently don't have street lights or noise from traffic or railroads and really enjoy our quite nights. I do believe a route from the Union Pacific to San Luis would be beneficial, just not where it impacts so many homes.

Comment: 15 7/27/2022

No no no it is of no benefit to the railroad to inany way help Tyma with traffic crossing and no less than 10 up to 23 intersections will be compromised and that is the right word this project will completely compromise transportation in Yuma and the railroad does NOT CARE and

Comment: 16 7/28/2022

Dear YMPO: Your proposed NC-2 route runs directly by the Sun Leisure Estates development at County 14th St and 4th Ave Extension. We implore you not to run a heavy freight rail line so close to our homes. We already experience noise from MCAS, but at least that is mostly during the day. Heavy freight trains often run late at night, and they are loud. They may also be carrying toxic materials that could be dangerous so close to residences. Thank you for not building a heavy freight line near Sun Leisure Estates

Comment: 17 7/28/2022

I am a resident of Sun Leisure Estates at county 14th and 4th Ave Extension. In reviewing the proposed Routes for the heavy rail line study, I want to strongly voice my objections to n1 and especially n2 as these two would severely adversely affect our entire community of mostly elderly retirees.

Comment: 18 7/11/2022

A new rail spur from San Luis is a good idea. It should be far east side of the city of Yuma. The spur should connect with the UP main between 7E, and 9E on the NS of Interstate 8. There is an industrial park between Araby, and 8E. We need to start utilizing that space for warehousing, and Distribution centers for retail and service corporations.

If at anytime that the ports on the west coast are at capacity, then another port in Mexico, could bring freight up here. Autonomous trucks, and trucks with alternative sources of power are coming, so we need to start to plan our logistics and supply chain accordingly. Over the road freight is on its way out. The new generation of driver doesn't like the lifestyle. So a perfect

storm of new truck technology, and a new driver dynamic, should come a new logistics model to do the business of moving freight.

The time has come for more distribution centers, and intermodal yards. Intermodal freight can be transported quicker by train, than over the road. The need for drivers would be more middle mile, and last mile, rather than just middle mile. Make middle mile regional. With an enhanced intermodal, and distribution infrastructure logistics logjams can be averted. All the elements come back to rail. With a global economy, we as a country must learn to compete in a global economy. Rail is the answer. This is a good idea.

We also need to not put rail where it interferes with homes, businesses, or agriculture. Those are needed in our society also. So as far east as this can go once the rail enters the U.S. will be good for everyone. Maybe if we bring in some of our imports through Mexico, and bring them up here to Yuma, and then dispatch them to other parts of the US, then maybe we can clear this logjam in logistics.

Comment: 19 7/21/2022

I believe your survey is flawed. If you strongly disagree with the rail you are required to choose a route to complete the survey. In the various routes choices they should have included the choice of 'None of the above"

You will receive false positives.

Comment: 20 7/28/2022

Please do not build you R R line close to our community, Sun Leasure. With the Marine air bace and race track so close, the added noise would be horable. Thanks

Comment 21:

7/11/2022

After seeing the announcement in the Yuma Sun, I went to your website to look at the conceptual alternatives survey.

- 1. It is not designed in a format a user can input. One cannot write on it nor check off any of the boxes.
- 2. The print is too small and has no option for enlargement.
- 3. The justification for this corridor is not written in laymen's language on the survey nor in the Sun article. I have no real idea what's going on now, what's inadequate about the present and why this is better.
- 4. As someone who personally writes for a mass audience, nothing here is written for a mass audience. Its transportation specialists writing for transportation specialists.
- 5. In neither the Sun article nor anywhere else is the cost of construction involved, the rights-of-way. Just a bland map.

At the very least the survey should be redesigned for size, readability and input. One should not have to work hard to read and respond to this.

I am going to visit an open house, then give my perceptions at a Yuma City Council meeting.
Yuma Councilmember
Comment 22:

7/13/2022 Dear Charles, Chris, and Peter I represent Adrienne McLaughlin and Saint Isidore's LLC who are significant farm land owners in the Yuma valley.

I cannot attend the public open house today in Yuma, but I would like to go on record.

We would oppose any rail line that goes through any of the very fertile and productive farm land in the Yuma valley.

In years past, the Union Pacific proposed a multi-track rail line that connected Mexico to their main line in the Yuma area.

At that time, farmers and farm land owners objected to this rail line for primarily 3 reasons:

- 1. the lines would take farm ground out of production, for the line itself and the buffer on either side
- 2. the lines would create interruptions in traffic flow at each road/rail crossing, especially critical during produce harvest times.
- 3. the diesel locomotive exhaust put into the air would fall on the crops, contaminating the crops, and rendering the crops un-marketable.

Please seriously consider these objections and chose routes that avoid the Yuma valley farm ground.

Comment 23:

7/28/2022

Comment:

Regarding the plans for a rail system running through the county from Mexico to Yuma, I am very much opposed to it.

Regrettably, YMPO has chosen to not be completely transparent with such plans to completely disrupt and fundamentally alter rural life as we have now in the county. Notifying those that are potentially affected was insufficient. Not everyone follows local newpapers, and as such, myself and many neighbors I spoke with were completely unaware of the meetings being held in July. We also were completely unaware of the rail system being planned!

Most of us living in the county of Yuma are living here expressly because we desire a quiet, peaceable, minimally occupied community in order to live life at a slower pace compared to "city living".

Running a freight rail system through here would ruin this community in multiple aspects. Property values would decrease significantly thereby reducing tax income for the county; congestion on MANY levels would drastically increase; trash, waste and unaccountable debri would increase significantly. Agricultural properties stretching all along the proposed system would be ruined. We need agricultural land to grow cotton, alfalfa, & citrus. What about increased illegal huma trafficking brought about by a rail that would destabilize our county in many ways, civilly and criminally?

As the desire for rural living increases, and more individuals buy ranchettes here in the county, it seems like a slap in the face to many residents that YMPO would consider running a rail track through or near many of our back yards!

I implore you to reconsider your plans. Put the track out in an undeveloped area like dateland or Wellton, or even the Winterhaven/Algodones/Felicity CA area that can bear the impact of a rail system without disrupting numerous individual lives and their properties!

Comment: 24 8/1/2022

Dear YMPO: Your proposed NC-2 route runs directly by the Sun Leisure Estates development at County 14th St and 4th Ave Extension. We implore you not to run a heavy freight rail line so close to our homes. We already experience noise from MCAS, but at least that is mostly during the day. Comment: 25 7/24/2022

No to anymore train tracks through Yuma, NADA!

Comment 26:

7/12/2022

The rail should not be anywhere near homes or residential neighborhoods, and especially not near any schools. N-1 or N-2 makes the most sense, connected to NC-1 or NC-2.

Survey Comments

Comment: 27 7/25/2022

I am not in support of anything that restricts traffic in Yuma. One of the great things about Yuma is that there is virtually no traffic. Also, I spent some time living in northwest Indiana where they had several of these railway Corredor's and traveling around town was absolutely awful and at times there were 30 minute delays. The only way they should even be considered is if the entire railway can be south of the city and then perhaps straight along the border fence. I live near a proposed route.

Comment: 28 7/25/2022

MY husband and I have NO wish to have a freight rail corridor in the Yuma region.

Comment: 29 7/25/2022

Absolutely not needed.

Comment: 30 7/25/2022

Traffic and noise mitigation have not been addressed.

Comment: 31 7/25/2022

When we first rented a lot in the Foothills, we asked the owner if there were any train noises with the answer being no. We have since purchased a lot and built our home in the nice quiet area a block from Avenue 15E. NO TRAINS!

Comment: 32 7/25/2022

I do not support this railroad because it should not be running near a growing residential/neighborhood area.

Comment: 33 7/24/2022

Not a good idea. Need more information

Comment: 34 7/24/2022

I have concerns about increased crimes and the type of railroad: either short line or UPRR main line, number of dedicated crossings, need for box car transfer freight terminals, safety of rail workers on line etc. Yuma doesnt have a train freight yard like Tucson. The cost to build one might be prohibited. There are also immigration concerns like have arisen on the short line from Nogales AZ to Tucxon, AZ.

Comment: 35 7/24/2022

I don't want another train running near our neighborhood. Use the open desert.

Comment: 36 7/24/2022

This is too near our neighborhood. Too dangerous and loud. This will devalue our homes and make it undesirable to buy here.

Comment: 37 7/24/2022

You already have a existing rail line that runs to Mexico along the Levee by Colorado River. Update and use it

Comment: 38 7/24/2022

This will run directly behind my house! Certainly you can find a route away from neighborhoods!

Comment: 39 7/24/2022

The further out from town on either side would lessen the accidents that would happen at railroad crossings. Not to mention the noise going through neighborhoods. What were you thinking when you came up with this proposal? Not very much or very practical!

Comment: 40 7/24/2022

I am concerned with some of the facts I found on studies that where done for residential areas near rail road tracks specifically trains that produce diesel pollution, noise and un controlled rail crossings accidents and many more. Asthma A study completed by the Mayo Clinic measuring 3,970 people found asthma to be 40 to 70 percent more prevalent in children who

lived near a railroad intersection. The pollution caused by the diesel engines permeate the air around the tracks and the homes in the nearby area. Train Track Dangers Railroad tracks are often not fenced in and many children have put themselves in danger when playing on or near the tracks. According to Operation Life Saver, "every three hours, a person or vehicle is hit by a train." Living in close proximity to railroad tracks increases the likelihood of your children walking near the tracks to get to or from school or when playing in the neighborhood. Look for tracks with fencing to ensure child safety around the railroad tracks. Cancer A study found those living near railroad tracks, especially those with high traffic volume, to have higher risk for cancer due to exposure to diesel pollution from the trains. Factors to consider are proximity to the tracks or station, volume of trains, and freight percentage. Each of the mentioned factors increases the risk. Traffic At most train intersections, a long line of cars will stop when waiting for a train to pass. These idling cars increase the pollution in the neighborhood and can contribute to impatient drivers and unsafe driving practices when the train does pass.

Comment: 41 7/24/2022

This is not good for housing values and safety in our communities

Comment: 42 7/24/2022

Without more information I question the negative impact on our growers & residential areas not to mention highways. The two recent information sessions were poorly advertised & offered limited info via storyboards. If YMPO thinks this is a viable project please schedule well publicized public meetings that would allow for questions & answers in a large enough venue to accommodate the crowd.

Comment: 43 7/24/2022

Should only be developed where there is no impact to current residential communities. We do not need the "710 Freeway" running through our backyards, especial with no direct economic impact to our community; as the funds will "pass by" us.

Comment: 44 7/24/2022

NO to N-4 because it impacts my travel and activities most. YES for N-5 because it least impacts my travel and life. NO to NC-2m NC-1, SC-1, SC-2 because they create additional opportunities for vehicle vs train accidents in this North Central and South Central road net that already sees many vehicle crashes at intersections with South County people just not paying attention. Yes to NC-4 & NC-3 because it stays near SR195 corridor. Yes to SC-3 & SC-4 because it stays near SR195 corridor. Prefer S-3 because it pulls traffic away from San Luis city congestion. Isolates illegal cross border traffic into more rural area.

Comment: 45 7/24/2022

The existing road infrastructure is already choked with traffic and adding more railroad crossings and intermodal freight traffic will clog up the system even more. Frequently hazardous materials in bulk quantities are transported via train. These tracks would push that material into residential neighborhoods and would cause increased risks and dangers to residents. What would Yuma get from this proposed line? How would Yuma benefit? It's commercial traffic going

in and out of Mexico then to a transfer yard for distribution out. Yes there would be some (few) jobs created, but at what cost to the environment, neighborhoods, and communities.

Comment: 46 7/24/2022

Additional train traffics through residential neighborhoods is not something I support. Traffic is already a concern at the crossings at 9E with school buses and residential traffic.

Comment: 47 7/24/2022

I live off Abe 8E. I feel a freight line running this close to a residential area, that is still expanding, would not be healthy to those residents all ready living there, but future residents that may choose to. This would lower our quality of life.

Comment: 48 7/24/2022

Anyway this is routed ruins someone's quality of life, and potentially our health with added pollutants. Hell no!

Comment: 49 7/24/2022

This project would effect the value of my home. The noise and distance from a railroad make a huge difference.

Comment: 50 7/24/2022

I can see it might be beneficial but do not want it anywhere near my proprty-would impact my property value negatively, and affect my health and lifestyle.

Comment: 51 7/24/2022

If there are to be train crossing highways, the safest equipment to keep motorist and pedestrians safe is an absolute must! ON ALL CROSSINGS!

Comment: 52 7/24/2022

This project will cause more unsafe areas in our city by crossing major streets. Property values will go down. Illegal immigration will increase and it's already high. Additionally, the noise and pollution this will cause for our city and agriculture is unacceptable. Do not do this to our city.

Comment: 53 7/24/2022

We do not want this freight line. Why cut up Yuma...

Comment: 54 7/23/2022

N1 and N2 go very near to the Sun Leisure Estates community which I live in and we already have enough noise from the MCAS airfield, especially in March and September during training.

Comment: 55 7/23/2022

Yuma, and San Luis, needs industrial growth to provide good paying jobs for our citizens. Industry often needs rail service - and Yuma has lost industrial opportunities in the past due to lack of rail service. We have much land that is zoned industrial, especially around MCAS where other development is limited by the noise zones. Let's provide rail service to this land (Routes N-2 and N-1). Let's connect commercial and industrial in San Luis near their new port of entry (Route S-1) by rail to the mainline of the UPRR. And let's extend the rail line to the border and across so that maquiladora business can thrive in SLRC. Yuma's No. 1 need is better jobs - a rail line and the industrial growth that would accompany it go a long way towards providing those better jobs.

Comment: 56 7/22/2022 No thank you.

Comment: 57 7/22/2022

Yuma plays an extremely important role in feeding our nation, removing any agriculture land would play a major role with food insecurity. Each year there is less farm ground in Yuma County for growing vegetables with some of the most productive in the Yuma Valley. Another alternative between 3E and 5 E would be disastrous, as well, with the U. S. Marine base, airport, significant number of residential housing, and again a productive farm area.

Comment: 58 7/22/2022

I do not want a train that closevto my home.

Comment: 59 7/22/2022

I believe going with N-1 N-2 would be the best option as it will not interfere with local homes or subdivision in the proposed area.

Comment: 60 7/21/2022

I do not support any current version of this project.

Comment: 61 7/21/2022

The NC-1 and NC-2 and the S-1 and S-2 would destroy highly productive farmland.

Comment: 62 7/21/2022

Need better info before a truly informed comment can be voiced.

Comment: 63 7/21/2022

The concept is a giant waste of time. Mexico will never build rail to Yuma County's border. I realize we must plan ahead but we need to wait until Mexico actually begins construction then the chances of it becoming a reality will rise from 0% to 15%. We will be boarding cruise ships in Rocky Point well before this happens. lol

Comment: 64

7/21/2022

We as long time yuma, Arizona residents 23 years do not want to ruin our beautiful city by a stinking RR blocking traffic and disrupting our peace send it back to mexacali calif.another costly govt.trying to screw yumans.

Comment: 65 7/21/2022

Araby roundabouts do not support large container trucks. Araby has new hospital and major access to schools K through College.

Comment: 66 7/21/2022

Any route chosen will be very expensive to build. Why did you not include the old rail route that is on the levee and was operational until the mid 90's? It extends to County 18th and would require only a few miles of disruption to existing property. It connects with the UPRR at there old downtown yard. You would eliminate having to go under I-8, and significantly reduce the need for road crossing's. Apparently I am not able to submit my opinion without selecting preferred routes. I will check the boxes but not in support of any route. Just as a way to submit my opinion. Michael Edgar

Comment: 67 7/21/2022

The amount of lines that are purposed is extreme and goes through too many residential areas.

Comment: 68 7/21/2022

We don't need the mess and disruption. Also it will cause traffic congestion. Are RR crossings going to underpass's or overpass's? Put it somewhere else.

Comment: 69 7/20/2022

How many times do we have to say NO! There currently is nothing to transport by rail, previous studies by GYEDC have demonstrated that. Is the port in Mexico ever going to happen? Do you think letting it lie for 9 years and then bring it back will change anything? Kill it and forget it

Comment: 70 7/20/2022 popop

Comment: 71 7/20/2022 Blah Blah blah

Comment: 72 7/20/2022

Depends on the final location of the rail corridor.

Comment: 73 7/20/2022

It would be very disruptive to agricultural production and resident travel, not to mention decrease home values.

Comment: 74 7/19/2022

But NOT NC2! It runs smack next to our Sun Leisure Estates development. We get enough noise from the air base. We should NOT have to put up with freight train noise as well! Please avoid going so close to residences. Thank you.

Comment: 75 7/19/2022

While I am open for the expansion of business to Yuma/Yuma county. I'm not supportive of taking or relocating businesses or home owners when there is already a service provided. In this case there is already a rail line that pretty much runs from the U.S./Mexico boarder. Located in the west county running north bound then east bound along the northern boundary of the city/county. This line already ties into the UPRR near the Ocean to Ocean bridge. It makes better business since to reuse this route. The land is already purposed for this situation. It wouldn't take as much to bring it up to modern standards.

Comment: 76 7/19/2022

No. No. No. No to all if it.

Comment: 77 7/19/2022

We don't support this project. Take it off the table.

Comment: 78 7/18/2022

Property values will suffer If a corridor must be built it should not be run through the city or it's rural communities.

Comment: 79 7/18/2022

I am all for commerce. However, commerce should occur in the most commercial zones. Commerce (trains) and residence's do not mix! Against plan N5

Comment: 80 7/18/2022

None of the proposed pathways near residential areas is a good option. You are going to rattle manufactured homes off their foundations.

Comment: 81 7/18/2022

Border security is paramount. No corridor should be considered until the border crisis is resolved and even then, a heavy rail connector should be located outside the metropolitan areas.

Comment: 82 7/17/2022

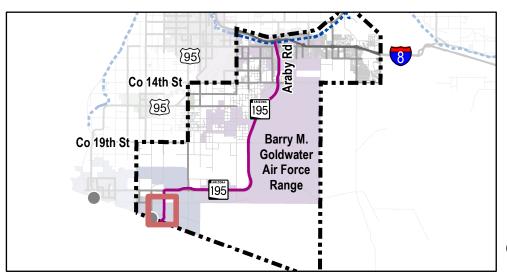

No one wants their property value destroyed by installing tracks through neighborhoods. There is enough open desert where there are not existing neighborhoods

YMPO SUMMARY AGENDA ITEM #8

Regional Project Priority List

DATE: October 6, 2022

SUBJECT: Regional Project Priority List Opportunity

SUMMARY:

The Rural Transportation Advocacy Committee has gone through a lengthy process last year with the Arizona Greater MPO/COGs participating in an exercise of compiling project in our region, by municipality, by ranking and again compiling for a regional list of projects to be submitted on behalf of the RTAC and Arizona Congressman to be considered for Arizona funding.

Since the 2022 Rural Transportation Summit that was at the Ak-Chin Casino, Maricopa, Arizona in September 2022, the though at the YMPO was the request the first time was timeframe ok. The projects lists took the summer to refine. This last round, the notification was approximately 75 days of working on this effort and it was I believe a bit too fast and more time was needed

The thought is to prepare for this event each year and continue this effort until the Earmark process with the Arizona Congressional people either stops or is modified. If we keep this as an ever living document that can be given to the Congressional delegates at any time, then the YMPO is one-step further.

ACTION NEEDED:

No Action required, but guidance to respective municipalities to update the previous list. August TAC meeting an approved list will be made to the Executive Board.

CONTACT PERSON:

Charles A. Gutierrez, Senior Planning/Mobility Manager, 928-783-8911

YMPO SUMMARY AGENDA ITEM #9 Adoption of Arizona Federal Highways Performance

DATE: October 6, 2022

SUBJECT: Adoption of Arizona Federal Highways Performance Measures

SUMMARY:

FHWA defines Transportation Performance Management (TPM) as a strategic approach that uses system information to make investment and policy decisions to achieve national performance goals. The Fixing America's Surface Transportation (FAST) Act of 2015 is the current Federal legislation that guides surface transportation infrastructure planning and investments. The previous Act was Moving Ahead for Progress in the 21st Century (MAP-21), from 2012.

MAP-21 included several provisions that collectively are being used to guide the Federal surface transportation program to focus on the achievement of performance outcomes. The performance outcomes provisions, administered by different agencies within the U.S. Department of Transportation (USDOT), are being implemented by rulemakings, including several under FHWA's purview. The provisions are organized by six performance management elements.

The FAST Act built on the MAP-21 changes and provided long-term funding certainty for surface transportation infrastructure planning and investment. TPM performance management outcomes are grouped into six elements to communicate the efforts more effectively under way to implement the statutory requirements as follows: National Goals, Measures, Targets, Plans, Reports, and Accountability and Transparency. The National Goals are listed as: Safety, Infrastructure Condition, Congestion Reduction, System Reliability, Freight Movement and Economic Vitality, Environmental Sustainability, and Reduced Project Delivery Delays.

Each State has developed and submitted to the federal surface transportation agencies a series of performance measures and Metropolitan Planning Organizations (MPOs) have the opportunity to do the same. Most Arizona MPOs have decided to accept the same performance measures. YMPO has reviewed the performance measures prepared by ADOT and the Technical Advisory Committee has recommended that we should adopt these performance measures as our own unless, and until, we are able to prepare our own regional performance measures. A letter is attached that agrees that the YMPO adopts the same performance measures that the State of Arizona is using.

TECHNICAL & POLICY IMPLICATIONS:

TECHNICAL: The process requires that MPOs either develop and adopt their own performance measures or adopt the State's. This requirement could affect the federal funds being allocated to the YMPO region if not enacted correctly.

POLICY: Federal guidelines require the MPO's adherence to federal laws, rules and regulations regarding the development of regional transportation policies, as part of our annual agreement with ADOT.

ACTION NEEDED:

Recommend Adoption of the Arizona MAP-21 Performance Targets developed by ADOT, as outlined in the attached letter to the YMPO Executive Board. This item is on the agenda as information, discussion, and/or action.

YMPO SUMMARY Agenda Item 10 Regional Coordination Plan (RCP) Selection

DATE: October 6, 2022

SUBJECT: Regional Coordination Plan (RCP) Status Selection

SUMMARY:

The YMPO RCP is a plan that identifies the transportation needs of individuals with disabilities, senior adults, and people with low incomes. It provides strategies for meeting those local needs and prioritizes transportation services for funding and implementation. This effort is funded by the Federal Transit Administration's (FTA) 5310 Program through the Arizona Department of Transportation's (ADOT) Transit Section. A full update to the RCP normally occurs every four (4) years with annual updates to the data being provided by YMPO staff. The RCP aims to maximize the program's collective coverage by minimizing the duplication of services.

YMPO has released the new RFP and the new PROPOSED timeline is as follows:

- Release date August 24, 2022
- RFP submittal September 21, 2022
- RFP Distributed to TAC September 22, 2022
- TAC recommends consultant October 13, 2022
- Notice to proceed possible approval by Board
 - o October 27, 2022
- Tac recommends approval of Final Plan April 13, 2022
- RCP final report due April 27, 2022

Today, the TAC has submitted scores to the YMPO on two candidate firms. LSC Transit and Wilson and Company

The results are as follows.

PUBLIC INPUT: No members of the public have commented on this to date.

ACTION NEEDED:

A recommendation for a consulting firm for the Regional Coordination Plan. This item is on the agenda for review, discussion, and/or action.

CONTACT PERSON: Charles Gutierrez, Senior Planning Manager, 928-783-8911
